Forerunning Value Mechanics in Value Science and Theory 2 and 3 (V + B U + S) Mar 29 2022 Value theory is a new theory the "value mechanics" that extends w.r.t. quantum mechanics, general relativity, the unified theory of everything, and the string theory into "abstract mechanics" the abstract theory. Thus hypothetically a perfect level when human knowledge becomes ideal to realize teleportation, telepathizing to control dash boards and consoles of digitized machines with the brain. A hypothetical time for AI to reach its peak and perfect robots emergency, time travel possibility, complete understanding of the black/white/worm holes could be engineered as a program to the highest levels and the theory of infinite universe(s) becoming functionally abstract. Great theories of anti-aging would be established, thanks to "time mechanics, light and information mechanics". Time is flexible and entangles, light photon is sensitive, and information-idea the powerhouse of the universe(s). A time when the black hole could be used to assist the universe instead of fears of it as the most powerful natural machine of destruction. The model of flexibility universality fluidity was hypothesized and tested through various experiments with figures and found to rationally agreeing with value cores and characteristics of a system. The universe(s) is itself a natural intelligent computer and at the same time a printer with time 1. To every intelligent conscious value added on a basic, there is a valuable to be further enhanced: [(v + b u + s)], ... 2. To every abstract universe, there is its exact reality with gravity and energy: [(n) = 1/(n-1) = 1/(1-n) - n^2 n^3-n^2-1], ... 3. Entropy physically actualizes abstract intelligence of natural printers "vice versa or negates" its results: (The black hole and the white hole: The universe(s) is a natural abstract computer that works digitally back and forth, and it is at the same time a natural printer that prints)[F = GMm/r^2 - A^2/r^2 - (1/n)^2], ... 4. Nature is made up of boundaries, barriers and gate constrictions in all things, everywhere, and at all levels, and wherever these barriers exist, there is a transition governed by time, or a time machine: [(A) = (t^2/e)+], ...

[What They Don't Teach You in Broadcasting](#) Mar 05 2020 One of the many problems the media in Nigeria and developing nations contend with is the absence of current books and journals written by practitioners working within relevant contexts, existing regulations, and local environments. This Book, [What They Don't Teach You in Broadcasting](#), is an experience-based knowledge sharing initiative with practical examples aimed at bridging the increasing gap between theory and practice in Nigeria. The book contains those issues, experiences and realities that journalists must encounter in the practice of the profession which we were not taught in school. It is a contribution to the efforts of our institutions and the media industry in building a functional bridge between the classroom and the field.

MPSC Feb 02 2020 Sandy Clyburn, (fictitious), was orphaned at five, during London's Blitz, 1943. He was evacuated to Wales for the remainder of the war, then returned to London, to foster homes and finally an orphanage run by the 'Skunks', (Shanks) who were drunkards and gamblers, denying their charges their due. Leaving school at age 15 and not wanting to remain in London, he took an audition for the Royal Marines School Of Music, Deal, Kent. He had no previous music study of any kind, other than a friend who showed him some basic march drumming, cadet style. The contract; 3 and 12 years Boy and Man. At his audition he was told, the quota for Band Drummers, (Percussionists), at that time were filled. However, he agreed to accept a position as Bugler, 'till such time as new Band Drummer positioned opened up, that were frequented throughout the year. (Buglers conscript as Marines, fighting soldiers. RM). Musicians, non-combatant, Bandsmen, RMB), almost a different service. Accepting the position of Bugler/Drummer, RM., would put him on the spot, as it were. The story centers around his trials, tribulations and general struggle to obtain the objective of Musician/Percussionist. Friends help him gain knowledge and ability in order to transfer. Time was not on his side. Boy Musicians had four years training as opposed to one year for Buglers, who were then shipped to a Division, then a ship or Naval establishment. After graduating as a Bugler, eight months later, much to his surprise, he's granted a six month trial period in order to prove his worth. Stepping back to the move from the School, he allowed himself to be coerced and talked into stealing a clarinet. A friend convinces him that the extra cash would be handy for Christmas leave. His involvement, minimal. An instrument or two, would be stashed in his kit while his back was turned, thereby getting them out of barracks without notice. The friend, also a Londoner, made arrangements with Sandy to meet and pedal what had been stolen. That was done. Now, with the granting of a six month trial period he was returning to Deal, that would leave approximately sixteen months before reaching age 18 and adulthood. Through the help of the Percussion Bandmaster, who believed in his ability, he performs and solo's Xylophone, at the end of school year, Summer, concert. With just one year to cram, he embarks on a strict practice schedule. February of 1955 is a particular bad winter for an Influenza epidemic and Sandy is admitted into the sick-bay. While there, he's visited by MP's and a Detective, who were investigating instruments theft during Christmas leave. This investigation also harked back to previous occurrences that went unsolved. Sandy's name came up, and while sick, he was interrogated. He caves in and is Court Martialed.

Drum Rudiments Sep 10 2020 The drum rudiments are the language of drummers. They are to us what scales and chords are to the other instruments. Understanding the rudiments allows the drummer to communicate with other drummers and also have the ability to interpret terminology and rhythms that are so often seen in music and music publications. This book is designed for drummers of all levels who would like knowledge of the snare drum rudiments but haven't had the advantage of studying them formally. It is a quick, simple approach that can be learned by any drummer who can do single strokes and double strokes [strokes using the stick rebound] While this method is not meant to be a substitute for the traditional way of learning the drum rudiments, which I totally recommend, one of the advantages of it is that it is a fast, easy alternate method that will give an understanding of the how the rudiments are played and should sound. If nothing else, this book will improve the drummer's overall technique and playing. After studying the approach described, it will be an easy transition to take the study of the rudiments further learning to play them in the traditional way and apply them to the drumsset.

Linear Programming: Mathematics, Theory and Algorithms Oct 31 2019 Linear Programming provides an in-depth look at simplex based as well as the more recent interior point techniques for solving linear programming problems. Starting with a review of the mathematical underpinnings of these approaches, the text provides details of the primal and dual simplex methods with the primal-dual, composite, and steepest edge simplex algorithms. This then is followed by a discussion of interior point techniques, including projective and affine potential reduction, primal and dual affine scaling, and path following algorithms. Also covered is the theory and solution of the linear complementarity problem using both the complementary pivot algorithm and interior point routines. A feature of the book is its early and extensive development and use of duality theory. Audience: The book is written for students in the areas of mathematics, economics, engineering and management science, and professionals who need a sound foundation in the important and dynamic discipline of linear programming.

[Double Bass Drumming](#) Jan 15 2021 Joe Franco presents an organized discussion of this powerful and consistent sound in a method he calls "The Single Stroke System." Linear Programming and Resource Allocation Modeling Dec 02 2019 Guides in the application of linear programming to firm decision making, with the goal of giving decision-makers a better understanding of methods at their disposal Useful as a main resource or as a supplement in an economics or management science course, this comprehensive book addresses the deficiencies of other texts when it comes to covering linear programming theory—especially where data envelopment analysis (DEA) is concerned—and provides the foundation for the development of DEA. Linear Programming and Resource Allocation Modeling begins by introducing primal and dual problems via an optimum product mix problem, and reviews the rudiments of vector and matrix operations. It then goes on to cover: the canonical and standard forms of a linear programming problem; the computational aspects of linear programming; variations of the standard simplex theme; duality theory; single- and multiple- process production functions; sensitivity analysis of the optimal solution; structural changes; and parametric programming. The primal and dual problems are then reformulated and re-examined in the context of Lagrangian saddle points, and a host of duality and complementary slackness theorems are offered. The book also covers primal and dual quadratic programs, the complementary pivot method, primal and dual linear fractional functional programs, and (matrix) game theory solutions via linear programming, and data envelopment analysis (DEA). This book: Appeals to those wishing to solve linear optimization problems in areas such as economics, business administration and management, agriculture and energy, strategic planning, public decision making, and health care Fills the need for a linear programming applications component in a management science or economics course Provides a complete treatment of linear programming as applied to activity selection and usage Contains many detailed example problems as well as textual and graphical explanations Linear Programming and Resource Allocation Modeling is an excellent resource for professionals looking to solve linear optimization problems, and advanced undergraduate to beginning graduate level management science or economics students.

I Drum, Therefore I Am Feb 25 2022 Despite their central role in many forms of music-making, drummers have been largely neglected in the scholarly literature on music and education. But kit drummers are increasingly difficult to ignore. While exponents of the drum kit are frequently mocked in popular culture, they are also widely acknowledged to be central to the musical success and aesthetic appeal of any musical ensemble in which they are found. Drummers are also making their presence felt in music education, with increasing opportunities to learn their craft in formal contexts. Drawing on data collected from in-depth interviews and questionnaires, Gareth Dylan Smith explores the identities, practices and learning of teenage and adult kit drummers in and around London. As a London-based drummer and teacher of drummers, Smith uses his own identity as participant-researcher to inform and interpret other drummers' accounts of their experiences. Drummers learn in multi-modal ways, usually with a keen awareness of exemplars of their art and craft. The world of kit drumming is highly masculine, which presents opportunities and challenges to drummers of both sexes. Smith proposes a new model of the 'Snowball Self', which incorporates the constructs of identity realization, learning realization, meta-identities and contextual identities. Kit drummers' identities, practices and learning are found to be intertwined, as drummers exist in a web of interdependence. Drummers drum; therefore they are, they do, and they learn - in a rich tapestry of means and contexts. Drum Class Method, Volume 2 May 19 2021 The Heim books effectively present the rudiments of drumming and the reading of music both for individual and class instruction.

New Research on Cohesion and Coherence in Linguistics Oct 12 2020 The study of text cohesion and coherence has been a topic of heated discussion in Linguistics since the 1990s. Western linguists have developed two major theoretical frameworks to describe the relationship between the two concepts: one posits that cohesive devices are important means to ensure cohesion; the other argues that coherence does not rely on cohesion. Yet neither has complete explanatory power over reality, nor can they solve real-life problems. This title proposes a creative, concrete, and highly operational theoretical model that unites cohesion and coherence using authentic English or Chinese examples. The authors clarify the concepts of coherence and expand the scope of the research by focusing on a variety of internal and external factors, such as psycho-cognitive and socio-cultural factors. Moreover, the authors propose that the new theoretical paradigm can be applied to a range of other disciplines, including translation and foreign language teaching. This title has been one of the most cited works on cohesion and coherence in

China. Students and scholars of discourse analysis, linguistics, and language education will find this an invaluable reference.

Rethinking Social Inquiry Dec 14 2020 With innovative new chapters on process tracing, regression analysis, and natural experiments, the second edition of Rethinking Social Inquiry further extends the reach of this path-breaking book. The original debate with King, Keohane, and Verba now updated, remains central to the volume, and the new material illuminates evolving discussions of essential methodological tools. Thus, process tracing is often invoked as fundamental to qualitative analysis, but is rarely applied with precision. Pitfalls of regression analysis are sometimes noted, but often are inadequately examined. And the complex assumptions and trade-offs of natural experiments are poorly understood. The second edition extends the methodological horizon through exploring these critical tools. A distinctive feature of this edition is the online placement of four chapters from the prior edition, all focused on the dialogue with King, Keohane, and Verba. Also posted online are exercises for teaching process tracing and understanding process tracing.

Quadratics: The Multi-tom Focus Apr 17 2021 Quadratics: The Multi-tom Focus is a book geared toward the marching tenor drummer as well as the percussion instructor and composer. The book shines light on subtleties often overlooked by composers such as flow and counter-melodic lines. These ideas will also help behind the drums as the drummer can uncover new capabilities within their skillset. Quadratics is designed specifically for more advanced drummers. This allows the content of the book to merely touch on basics, identifying a starting point, and push forward from there. The flow of the book inclines similarly to a standard drumline warmup structure. Several parallels can be drawn in order to create a complete learning experience.
