*Bradley's Neurology in Clinical Practice E-Book* Aug 22 2021  
A practical, dynamic resource for practicing neurologists, clinicians and trainees, Bradley and Daroff's Neurology in Clinical Practice, Eighth Edition, offers a straightforward style, evidence-based information, and robust interactive content supplemented by treatment algorithms and images to keep you up to date with all that's current in this fast-changing field. This two-volume set is ideal for daily reference, featuring a unique organization by presenting symptom/sign and by specific disease entities—allowing you to access content in ways that mirror how you practice. More than 150 expert contributors, led by Drs. Joseph Jankovic, John C. Mazziotta, Scott L. Pomeroy, and Nancy J. Newman, provide up-to-date guidance that equips you to effectively diagnose and manage the full range of neurological disorders. Covers all aspects of today's neurology in an easy-to-read, clinically relevant manner. Allows for easy searches through an intuitive organization by both symptom and grouping of diseases. Features new and expanded content on movement disorders, genetic and immunologic disorders, tropical neurology, neuro-ophthalmology and neuro-otology, palliative care, pediatric neurology, and new and emerging

therapies. Offers even more detailed videos that depict how neurological disorders manifest, including EEG and seizures, deep brain stimulation for PD and tremor, sleep disorders, movement disorders, ocular oscillations, EMG evaluation, cranial neuropathies, and disorders of upper and lower motor neurons, as well as other neurologic signs.

**The Acquisition of Syntax in Romance Languages** Mar 05 2020 This volume includes a selection of papers that address a wide range of acquisition phenomena from different Romance languages and all share a common theoretical approach based on the Principles and Parameters theory. They favour, discuss and sometimes challenge traditional explanations of first and second language acquisition in terms of maturation of general principles universal to all languages. They all depart from the view that language acquisition can be explained in terms of learning language specific rules, constraints or structures. The different parts into which this volume is organized reflect different approaches that current research has offered, which deal with issues of development of reflexive pronouns, determiners, clitics, verbs, auxiliaries, Inflection, wh-movement, rsumptive pronouns, topic and focus, mood, the syntax/discourse interface, topic and focus, and null arguments.

*Exploring Implicit Cognition: Learning, Memory, and Social Cognitive Processes* Sep 30 2019 While widely studied, the capacity of the human mind remains largely unexplored. As such, researchers are continually seeking ways to understand the brain, its function, and its impact on human behavior. *Exploring Implicit Cognition: Learning, Memory, and Social Cognitive Processes* explores research surrounding the ways in which an individual's unconscious is able to influence and impact that person's behavior without their awareness. Focusing on topics pertaining to social cognition and the unconscious process, this

title is ideal for use by students, researchers, psychologists, and academicians interested in the latest insights into implicit cognition.

### **Cone-beam x-ray phase contrast tomography of biological samples : Optimization of contrast, resolution and field of view**

Aug 02 2022 Three-dimensional information of entire objects can be obtained by the remarkable technique of computed tomography (CT). In combination with phase sensitive X-ray imaging high contrast for soft tissue structures can be achieved as opposed to CT based on classical radiography. In this work biological samples ranging from micrometer sized single cells over multi-cellular nerve tissue to entire millimeter sized organs are investigated by use of cone-beam propagationbased X-ray phase contrast. Optimization with respect to contrast, resolution and field of view is achieved by addressing instrumentation, sample preparation and phase reconstruction techniques. By using laboratory sources functional soft tissue within the bony capsule of mouse cochleae is visualized in 3D with unprecedented image quality. At synchrotron storage rings the technique reveals more than 1000 axons running in parallel within a mouse nerve and enables doseefficient three-dimensional cellular imaging as well as two-dimensional imaging at high resolutions below 50 nm.

*Cognition and Contrast* Feb 25 2022 Since the beginning of her career, Professor Sabine De Knop has been doing research within the frameworks of Cognitive and Contrastive Linguistics and has mainly distinguished herself in three research areas: Language & Cognition, Construction Grammar and Applied linguistics. This volume brings together a range of contributions which open up new perspectives on these three topics, either

within one language or from a contrastive perspective. They are written by linguists who have worked with Professor Sabine De Knop at some point in her career. The papers propose new theoretical and empirical insights as well as innovative pedagogical practices in the fields of language and proficiency.

*Contrast Media* Jun 19 2021 This second, revised edition of *Contrast Media: Safety Issues and Guidelines*, presented in a handy, easy to use format, provides an invaluable, unique and unparalleled source of information on the safety issues relating to contrast media. It not only updates the successful first edition, but also contains a number of completely new chapters, for example on gadolinium-based contrast agents, meta-analyses in contrast media research and various regulatory issues.

Comprehensive consideration is given to the many different safety issues relating to iodinated, MR, ultrasound and barium contrast media. The text includes chapters on both acute and delayed non-renal adverse reactions and on renal adverse reactions. All those questions frequently raised in radiological practice are addressed, and the well-known European Society of Urogenital Radiology guidelines on contrast media are included.

*Mammals: A Compare and Contrast Book* Jul 01 2022 All mammals share certain characteristics that set them apart from animal classes. But some mammals live on land and other mammals spend their lives in water—each is adapted to its environment. Land mammals breathe oxygen through nostrils but some marine mammals breathe through blowholes. Compare and contrast mammals that live on land to those that live in the water.

**Routledge International Handbook of Consumer Psychology**  
Sep 22 2021 This unique handbook maps the growing field of consumer psychology in its increasingly global context. With contributions from over 70 scholars across four continents, the

book reflects the cross-cultural and multidisciplinary character of the field. Chapters relate the key consumer concepts to the progressive globalization of markets in which consumers act and consumption takes place. The book is divided into seven sections, offering a truly comprehensive reference work that covers: The historical foundations of the discipline and the rise of globalization The role of cognition and multisensory perception in consumers' judgements The social self, identity and well-being, including their relation to advertising Social and cultural influences on consumption, including politics and religion Decision making, attitudes and behaviorally based research Sustainable consumption and the role of branding The particularities of online settings in framing and affecting behavior The Routledge International Handbook of Consumer Psychology will be essential reading for anyone interested in how the perceptions, feelings and values of consumers interact with the decisions they make in relation to products and services in a global context. It will also be key reading for students and researchers across psychology and marketing, as well as professionals interested in a deeper understanding of the field.

**Cause and Contrast** Jan 27 2022

**New Contrast** Jan 15 2021

The Adaptive Brain II Sep 10 2020 The Adaptive Brain, II: Vision, Speech, Language, and Motor Control focuses on a unified theoretical analysis and predictions of important psychological and neurological data that illustrate the development of a true theory of mind and brain. The publication first elaborates on the quantized geometry of visual space and neural dynamics of form perception. Discussions focus on reflectance rivalry and spatial frequency detection, figure-ground separation by filling-in barriers, and disinhibitory propagation of functional scaling from boundaries to interiors.

The text then takes a look at neural dynamics of perceptual grouping and brightness perception. Topics include simulation of a parametric binocular brightness study, smoothly varying luminance contours versus steps of luminance change, macrocircuit of processing stages, paradoxical percepts as probes of adaptive processes, and analysis of the Beck theory of textural segmentation. The book examines the neural dynamics of speech and language coding and word recognition and recall, including automatic activation and limited-capacity attention, a macrocircuit for the self-organization of recognition and recall, role of intra-list restructuring and contextual associations, and temporal order information across item representations. The manuscript is a vital source of data for scientists and researchers interested in the development of a true theory of mind and brain.

**Lenition and Contrast** May 31 2022 This book analyzes 153 languages from a large variety of families to establish a previously unexplored relationship between phonetically conditioned sound changes such as lenitions and functional (meaning maintenance related) considerations. Carefully collecting numerous inventories of consonants, this collection is likely to become an important resource for future linguistics research. By distinguishing between phonetic and phonological neutralization, and showing that the first does not necessarily result in the second, Naomi Gurevich uncovers previously unexplored and often surprising trends in the relationship between phonetics and phonology.

*Advances in X-Ray Contrast* Nov 12 2020 For all that new non-X-ray technologies such as MR and ultrasound and its various manifestations have made an enormous impact in recent years on the practice of medical imaging, the use of X-rays and X-ray contrast-enhancing agents has retained an important position at the heart of the process. Indeed, with its frequent requirements

for high total dose regimes, CT has increased the use of contrast agents. Even helical/spiral CT which, it was initially argued, should reduce contrast as well as radiation loads, may actually require just as much or more of both because of the potential it offers for multi-phase scanning. Iodinated intravascular X-ray contrast agents, especially the more recently developed non-ionic agents, continue therefore to play a pivotal role in clinical imaging. These succinct and authoritative articles, originally appearing in the journal *Advances in X-ray Contrast*, range sufficiently widely for their compilation in this volume to be considered a mini-textbook on the water-soluble iodinated X-ray contrast agents and their applications. Each is written by an acknowledged and experienced expert in the field. They usefully cover the developmental history of the agents; defined risk factors, approaches to prophylaxis and, ultimately, of the treatment of adverse reactions; the interesting subject of supposed delayed reactions to contrast agents; the important organ-specific toxicities, cardiac toxicity, neurotoxicity and nephrotoxicity and high-dose toxicity as encountered in complex procedures; the sometimes special circumstances and occasional extreme conditions to which contrast agents may be exposed in Interventional Radiology; the special, in several ways, case of paediatric radiology; the controversial subject of thromboembolic phenomena in clinical angiography; and the precise role of contrast agents. As regards the practicalities of contrast administration regimes and imaging protocols it is really only in the area of CT that there is debate and controversy, and articles are included which cover CT of the liver, spleen and pancreas, and protocols for the new spiral/helical technology and even for the much less widely available electron-beam CT technology visualization. Pulmonary embolus diagnosis and protocols for contrast administration with this technology are

also discussed.

*Contrast Echocardiography in Clinical Practice* May 19 2021

Echocardiography has now reached its maturity and plays a key role in the clinical assessment of cardiac function. However, its ability to assess myocardial perfusion remains a clinical challenge. Myocardial contrast echocardiography is a technique that uses microbubbles. These microbubbles remain entirely within the intravascular space and their presence in any myocardial region denotes the status of microvascular perfusion within that region. During the last few years, a large number of research studies have been dedicated to this topic. The latest developments in echocardiographic techniques and second-generation contrast agents allow for the potential assessment of myocardial perfusion and provide an accurate endocardial border delineation. In the present book, these new echocardiographic techniques dedicated to the assessment of myocardial perfusion are described in detail by experts from both sides of the Atlantic. Tips and tricks are included, explaining the basic concepts that are needed to understand and perform contrast echocardiography.

Cognitive Biases Mar 29 2022 Many studies in cognitive psychology have provided evidence of systematic deviations in cognitive task performance relative to that dictated by optimality, rationality, or coherency. The texts in this volume present an account of research into the cognitive biases observed on various tasks: reasoning, categorization, evaluation, and probabilistic and confidence judgments. The authors have attempted to discern the contribution of the study of bias to our understanding of the cognitive processes involved in each case, rather than proposing an inventory of the different types of biases. A special section has been devoted to studies on the correction of biases and cognitive aids.

*Röntgenkontrastmittel* Nov 05 2022 Das Buch *Röntgenkontrastmittel - Übersicht, Anwendung und Pharmazeutische Aspekte* enthält eine kurze Darstellung der heute gebräuchlichen Röntgenkontrastmittel mit dem Schwerpunkt auf den wasserlöslichen, jodhaltigen Verbindungen. Es wendet sich damit an den (Klinik-)Apotheker, den anwendenden Arzt und nicht zuletzt an die technischen Mitarbeiter, die mit den Röntgenkontrastmitteln umgehen. Die für den Anwender der Kontrastmittel wesentlichen Eigenschaften werden in übersichtlicher Form und im Hinblick auf ihre praktische Bedeutung beschrieben. Schwerpunkte sind u. a. die chemischen und physikalischen Eigenschaften der Kontrastmittellösungen unter Wahrung der Stabilität, Reinheit und Sterilität sowie praktische Aspekte der Verträglichkeit, insbesondere bei Patienten mit besonderen Risikofaktoren.

Critical Developments and Applications of Swarm Intelligence  
May 07 2020 Artificial intelligence is a constantly advancing field that requires models in order to accurately create functional systems. The use of natural acumen to create artificial intelligence creates a field of research in which the natural and the artificial meet in a new and innovative way. *Critical Developments and Applications of Swarm Intelligence* is a critical academic publication that examines developing research, technologies, and function regarding natural and artificial acumen specifically, in regards to self-organized systems. Featuring coverage on a broad range of topics such as evolutionary algorithms, optimization techniques, and computational comparison, this book is geared toward academicians, students, researchers, and engineers seeking relevant and current research on the progressive research based on the implementation of swarm intelligence in self-organized systems.

## **Course Notes Apr 05 2020**

Contrast in Phonology Oct 31 2019 This book takes contrast, an issue that has been central to phonological theory since Saussure, as its central theme, making explicit its importance to phonological theory, perception, and acquisition. The volume brings together a number of different contemporary approaches to the theory of contrast, including chapters set within more abstract representation-based theories, as well as chapters that focus on functional phonetic theories and perceptual constraints. This book will be of interest to phonologists, phoneticians, psycholinguists, researchers in first and second language acquisition, and cognitive scientists interested in current thinking on this exciting topic.

**Visual Perception** Dec 14 2020 This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever-growing range of research topics in vision. In Part I, the treatment of visual physiology has been extensively revised with an updated account of retinal processing, a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters, and an up-to-date account of the primate visual pathway. Part II contains four largely new chapters which cover recent psychophysical evidence and computational model of early vision: edge detection, perceptual grouping, depth perception, and motion perception. The models discussed are extensively integrated with physiological evidence. All other chapters in Parts II, III, and IV have also been thoroughly updated.

*British Journal of Photography* Feb 13 2021

**The Journal of Psychological Medicine** Oct 12 2020

*Advances in Imaging and Electron Physics* Dec 02 2019

Advances in Imaging and Electron Physics merges two long-

running serials--Advances in Electronics and Electron Physics and Advances in Optical and Electron Microscopy. This series features extended articles on the physics of electron devices (especially semiconductor devices), particle optics at high and low energies, microlithography, image science and digital image processing, electromagnetic wave propagation, electron microscopy, and the computing methods used in all these domains. Contributions from leading international scholars and industry experts Discusses hot topic areas and presents current and future research trends Invaluable reference and guide for physicists, engineers and mathematicians

The Principles of Harmony and Contrast of Colours, and Their Applications to the Arts Apr 29 2022

The British Journal of Photography Jun 27 2019

Contrast Jul 21 2021 South African quarterly.

**The Grammatical Realization of Polarity Contrast** Jul 29 2019 The polarity of a sentence is crucial for its meaning. It is thus hardly surprising that languages have developed devices to highlight this meaning component and to contrast statements with negative and positive polarity in discourse. Research on this issue has started from languages like German and Dutch, where prosody and assertive particles are systematically associated with polarity contrast. Recently, the grammatical realization of polarity contrast has been at the center of investigations in a range of other languages as well. Core questions concern the formal repertoire and the exact meaning contribution of the relevant devices, the kind of contrast they evoke, and their relation to information structure and sentence mood. This volume brings together researchers from a theoretical, an empirical, and a typological orientation and enhances our understanding of polarity with the help of in-depth analyses and cross-linguistic comparisons dealing with the

syntactic, semantic, pragmatic and/or prosodic aspects of the phenomenon.

Contrast Sensitivity of the Human Eye and Its Effects on Image Quality Oct 04 2022 This book examines the contrast sensitivity of the human visual system - concerning the eye's ability to distinguish objects from each other or from the background - and its effects on the imageforming process. The text provides equations for determining various aspects of contrast sensitivity, in addition to models that easily can be used for practical applications.

**Production and Perception of Thematic Contrast in German** Sep 03 2022 Variations in speech melody (intonation) can be used to express different meanings (e.g. question vs. statement, friendliness). Yet, intonational information is hardly used in present-day linguistic models. When intonational information is used, it is mostly based on introspection rather than on empirical investigation; almost exclusively, a one-to-one relation between accent types and semantic function is assumed. This book focuses on an empirical investigation of thematic contrast in German. Thematic contrast has received considerable attention in semantics because sentences with contrastive themes can be used to imply propositions of various kinds without saying them explicitly. In this book, first an acoustic comparison between sentences produced in contrastive and non-contrastive contexts is described. Intonational realisation is quantified in terms of the height and position of tonal targets. The perceptual reality of different productions and the relevance of different acoustic cues are tested by means of rating experiments. Finally, the data are prosodically annotated by a group of linguists to explore the validity and explanatory power of different accent categories for contrastive and non-contrastive themes in German.

*Journal of the Malaria Institute of India* Apr 17 2021

*AJNR, American Journal of Neuroradiology* Dec 26 2021  
*Grating-Based X-Ray Phase-Contrast Mammography* Nov 24 2021  
This thesis offers an accessible guide to biomedical phase-contrast imaging with over 20 radiographic illustrations. It focuses on research to improve radiography, and particularly mammography applications, by using a novel X-ray imaging modality that exploits the wave-nature of X-rays, rather than just their absorption in tissue. Further, it explores a broad range of potential applications – from the assessment of breast cancer and the evaluation of microcalcification clusters, to the examination of renal stones. X-ray imaging is an indispensable tool in modern medical diagnostics, and ranges from simple radiography applications to advanced CT imaging protocols. This novel phase-contrast approach has the potential to deliver significantly improved diagnostic information, also and especially in cases where mammography is used for screening purposes. The thesis is based on several studies conducted by the author – working in close interdisciplinary cooperation with medical doctors at two university clinics in Munich – and successfully demonstrates this diagnostic potential in pre-clinical experiments.

**Image Analysis and Processing -- ICIAP 2009** Aug 10 2020  
This book constitutes the refereed proceedings of the 15th International Conference on Image Analysis and Processing, ICIAP 2009, held in Vietri sul Mare, Italy, in September 2009. The 107 revised full papers presented together with 3 invited papers were carefully reviewed and selected from 168 submissions. The papers are organized in topical sections on computer graphics and image processing, low and middle level processing, 2D and 3D segmentation, feature extraction and image analysis, object detection and recognition, video analysis and processing, pattern analysis and classification, learning,

graphs and trees, applications, shape analysis, face analysis, medical imaging, and image analysis and pattern recognition.

**Contrast Media** Jul 09 2020 This is the third edition of a very successful book that originally emerged from the work of a committee set up by the European Society of Urogenital Radiology in 1994 to consider the safety of contrast media used for diagnostic imaging. The new edition not only fully updates the previous edition, but also includes new chapters on complex topics such as pediatric issues and practical aspects of off-label contrast media use. Comprehensive consideration is given to the many different safety issues relating to iodine-based contrast media, gadolinium-based contrast media, microbubbles for ultrasound, and barium sulfate. The text includes chapters on both acute and delayed non-renal adverse reactions and on renal adverse reactions. All of the questions frequently raised in radiological practice are addressed. This book, presented in a handy, easy-to-use format, provides an invaluable, unique, and unparalleled source of information.

The Chemistry of Contrast Agents in Medical Magnetic Resonance Imaging Feb 02 2020 Magnetic Resonance Imaging (MRI) is one of the most important tools in clinical diagnostics and biomedical research. The number of MRI scanners operating around the world is estimated to be approximately 20,000, and the development of contrast agents, currently used in about a third of the 50 million clinical MRI examinations performed every year, has largely contributed to this significant achievement. This completely revised and extended second edition: Includes new chapters on targeted, responsive, PARACEST and nanoparticle MRI contrast agents. Covers the basic chemistries, MR physics and the most important techniques used by chemists in the characterization of MRI agents from every angle from synthesis to safety considerations.

Is written for all of those involved in the development and application of contrast agents in MRI. Presented in colour, it provides readers with true representation and easy interpretation of the images. A word from the Authors: Twelve years after the first edition published, we are convinced that the chemistry of MRI agents has a bright future. By assembling all important information on the design principles and functioning of magnetic resonance imaging probes, this book intends to be a useful tool for both experts and newcomers in the field. We hope that it helps inspire further work in order to create more efficient and specific imaging probes that will allow materializing the dream of seeing even deeper and better inside the living organisms. Reviews of the First Edition: "...attempts, for the first time, to review the whole spectrum of involved chemical disciplines in this technique..."—Journal of the American Chemical Society "...well balanced in its scope and attention to detail...a valuable addition to the library of MR scientists..."—NMR in Biomedicine

*The Oxford Compendium of Visual Illusions* Mar 17 2021 Visual illusions are compelling phenomena that draw attention to the brain's capacity to construct our perceptual world. The Compendium is a collection of over 100 chapters on visual illusions, written by the illusion creators or by vision scientists who have investigated mechanisms underlying the phenomena.

--

**Duality - Colouring Book and Journal by Tanya Bond - Contrast Greyscale Edition** Oct 24 2021 Duality

grayscale/greyscale coloring book is based on the images from the original Duality Deck - artist oracle cards by Tanya Bond. It has 26 images from the deck followed by the description/meaning and lined area for journalling. In the end of the book there are 9 extra images from the Red Dot series at the

back. Please note that GRAYSCALE colouring is not for everyone! The images in it are converted into a CONTRAST GRAYSCALE . Contrast grayscale is more suitable for beginner/less advanced colourists who are new to greyscale coloring. This book is also available in pale grayscale edition which is more suitable for advanced colourists - you can find it if you click on author's name (Tanya Bond). Please check my facebook page - Tanya's Charming Creatures - to have a look inside the book and see what type of images are in the book. All the images are SINGLE SIDED . Most of the images are portraits of women, with a few animals among bonus pages This book is based on an independently published oracle cards set - Duality Deck - that's available directly from the artist (on Etsy). The cards and this book can be enjoyed individually without the need to have both products.

**Computational Neuroscience** Jun 07 2020 This volume represents the diverse but interrelated nature of computational neuroscience research. The chapters are grouped into four different levels of investigation and analysis: subcellular, cellular, network and systems. This organization allows for a non-traditional view of the literature which is typically grouped by lines of experimental subject or subsystem studied. The book focuses on the computational questions and approaches characteristic of each level of analysis. This volume is also available in a casebound edition as Supplement Number One of the series International Review of Neurobiology.

**Exploring Language through Contrast** Aug 29 2019 The volume portrays a panorama of recent linguistic research in Poland in terms of comparison and juxtaposition as driving forces in an attempt to grasp descriptive and explanatory aspects of linguistic use and organization. The spectrum of contributions spans all the levels of language. The constellation of

methodological perspectives juxtaposes the generative theory and recent developments in cognitive linguistics, synchronic and diachronic perspectives, and a measure of freedom has also been allocated to a more traditional structurally-oriented and/or eclectic spirit. The notions of comparison and contrast have become the major force and the common denominator for all contributions in the service of explicating the central and the focal from what appears nebulous. A well-documented discussion on horizontal bonds between phonological primes and a refreshing new attempt to handle the phonology of Old English i-umlaut are complemented with equally illuminating topics in derivational morphology such as grinding, diminutives, suffix distributional preferences and compound nouns. In a similar fashion, drawing upon the fundamental phenomenon of dynamic alternating processes, syntactic topics focus on such problems as grammatical constructions with locatum verbs, the status of English NPN forms and a new typology of Old English verbs. Cognitively grounded phenomena are handled with equal zest, and range across the vast territory of backstage cognition: from the 'slip-of-the-tongue', through novelty of meaning achieved through collocation/construction environment, to a discussion on the emergence of metaphorical senses in Old English lexical concepts for 'fire' and 'light'. This stage inevitably leads us to further juxtapositions championed in the volume embracing subjectification and objectification in viewing arrangement, as well as dynamically anchored viewing impositions of 'the self' of the textual narrator. The contributions dealing with levels of discourse aspire to bring us closer to goals and norms in politeness and co-operation strategies, and also to an in-depth analysis of stylistic features based on corpora. The coda falls onto normative linguistics and thus closes the territory of contrast and juxtaposition. It provides

an insight into how a reflective thespian and a devoted linguist differ in viewing language without compromising the status and validity of their respective stances.
