The Twenty-first Century in Space

Dec 14 2020 This final entry in the History of Human Space Exploration mini-series by Ben

Evans continues with an in-depth look at the latter part of the 20th century and the start of the new millennium. Picking up where Partnership in Space left off, the story

commemorating the evolution of manned space exploration unfolds in further detail.

More than fifty years after Yuri Gagarin's pioneering journey into space, Evans extends his overview of how that momentous voyage continued through the

decades which followed. The Twenty-first Century in Space, the sixth book in the series, explores how the fledgling partnership between the United States and Russia in the 1990s gradually bore fruit and laid the groundwork for today's

International Space Station. The narrative follows the convergence of the Shuttle and Mir programs, together with standalone missions, including servicing the Hubble Space Telescope, many of whose technical and human lessons enabled the first efforts to build the ISS in orbit. The book also looks to the future of

developments in the
