**IBM DS8000 Easy Tier (Updated for DS8000 R9.0)** Apr 09 2020 This IBM® Redpaper™ publication describes the concepts and functions of IBM System Storage® Easy Tier®, and explains its practical use with the IBM DS8000® series and License Machine Code 7.9.0.xxx (also known as R9.0).. Easy Tier is designed to automate data placement throughout the storage system disks pool. It enables the system to (automatically and without disruption to applications) relocate data (at the extent level) across up to three drive tiers. The process is fully automated. Easy Tier also automatically rebalances extents among ranks within the same tier, removing workload skew between ranks, even within homogeneous and single-tier extent pools. Easy Tier supports a Manual Mode that enables you to relocate full volumes. Manual Mode also enables you to merge extent pools and offers a rank depopulation function. Easy Tier fully supports thin-provisioned Extent Space Efficient fixed block (FB) and count key data (CKD) volumes in Manual Mode and Automatic Mode. Easy Tier also supports extent pools with small extents (16 MiB extents for FB pools and 21 cylinders extents for CKD pools). Easy Tier also supports high-performance and high-capacity flash drives in the High-performance flash enclosure, and it enables additional user controls at the pool and volume levels. This paper is aimed at those professionals who want to understand the Easy Tier concept and its underlying design. It also provides guidance and practical illustrations for users who want to use the Easy Tier Manual Mode capabilities. Easy Tier includes additional capabilities to further enhance your storage performance automatically: Easy Tier Application, and Easy Tier Heat Map Transfer.

**Preaching that Matters Jun 11 2020 Listeners do love their pastors and they agree with the sermon content they hear,' Lori Carrell once explained to a group of pastors, 'but most sermons don't ask for change, and most listeners don't experience spiritual growth as a result of the sermon.' A participant responded: 'Let's get practical. I want my preaching to make a difference. What changes are worth making, and how do I make them?' In Preaching that Matters, Lori Carrell shares answers to that question, drawing on the experiences of thousands of people—preachers and their listeners—whose effort she has studied over many years. In each chapter of this book, she offers research revelations about high impact preaching that will encourage and challenge readers to continue to grow as preachers. She then links these principles with Reflective Practice Challenges (RPCs), exercises that honor the rich experiences of pastors while opening opportunities for self-analysis, spiritual introspection, conversation with a trusted other, or implementation of research-based preaching recommendations. The activities have been used by hundreds of other pastors, and each RPC has been carefully selected for its demonstrated contribution to the process of transforming sermon communication. A selection of the RPCs are available as a downloadable file. E-mail [resourcematerial@rowman.com](mailto:resourcematerial@rowman.com) for more information. As a communication expert, Carrell approaches preaching from a 'sermon communication' paradigm. She begins with the task of identifying the spiritually transformative purpose of the sermon and then explores exegeting, organizing, deepening, and delivering the sermon, as well as listening to the listeners and planning for continued transformation. Her own goal is simple: to inspire and equip clergy to make changes that will enhance the transformative power of their preaching. **Standardreaktionen in kritischen Fahrsituationen Nov 28 2021 Wie sich Menschen in kritischen Fahrsituationen verhalten, ist die zentrale Fragestellung der vorliegenden Arbeit. Ausgangspunkt waren Unfallszenarien, die dadurch aufgefallen waren, dass eine Vielzahl von Unfallbeteiligten jeweils ähnlich reagierte. Dies führte zu der Vermutung, dass es in manchen unfallträchtigen Situationen zu Standardreaktionen kommt: Viele Personen scheinen sich in vergleichbarer Art und Weise zu verhalten, wenn sie mit einer bestimmten kritischen Situation im Straßenverkehr konfrontiert sind. Da nur basierend auf Unfalldaten keine allgemeingültige Aussage zu Reaktionen in kritischen Fahrsituationen getroffen werden kann, wurden insgesamt zwei Studien mit dem Vehicle in the Loop (VIL) durchgeführt. Das VIL ermöglicht durch die Kombination eines Fahrsimulators mit einem realen Fahrzeug ein sowohl standardisiertes als auch sehr realistisches Erleben kritischer Situationen. Die Ergebnisse der Studien liefern Ansatzpunkte für notwendige Funktionalitäten von Fahrerassistenzsystemen, die Fahrer optimal unterstützen sollen, wenn ihnen in einer Kreuzungssituation die Vorfahrt genommen wird.**
