Bayesian Cost-Effectiveness Analysis of Medical Treatments Sep 16 2021 Cost-effectiveness analysis is becoming an increasingly important tool for decision making in the health systems. Cost-Effectiveness of Medical Treatments formulates the cost-effectiveness analysis as a statistical decision problem, identifies the sources of uncertainty of the problem, and gives an overview of the frequentist and Bayesian statistical approaches for decision making. Basic notions on decision theory such as space of decisions, space of nature, utility function of a decision and optimal decisions, are explained in detail using easy to read mathematics. Features Focuses on cost-effectiveness analysis as a statistical decision problem and applies the well-established optimal statistical decision methodology. Discusses utility functions for cost-effectiveness analysis. Enlarges the class of models typically used in cost-effectiveness analysis with the incorporation of linear models to account for covariates of the patients. This permits the formulation of the group (or subgroup) theory. Provides Bayesian procedures to account for model uncertainty in variable selection for linear models and in clustering for models for heterogeneous data. Model uncertainty in cost-effectiveness analysis has not been considered in the literature. Illustrates examples with real data. In order to facilitate the practical implementation of real datasets, provides the codes in Mathematica for the proposed methodology. The motivation for the book is to make the achievements in cost-effectiveness analysis accessible to health providers, who need to make optimal decisions, to the practitioners and to the students of health sciences. Elías Moreno is Professor of Statistics and Operational Research at the University of Granada, Spain, Corresponding Member of the Royal Academy of Sciences of Spain, and elect member of ISI. Francisco José Vázquez-Polo is Professor of Mathematics and Bayesian Methods at the University of Las Palmas de Gran Canaria, and Head of the Department of Quantitative Methods. Miguel Ángel Negrín is Senior Lecturer in the Department of Quantitative Methods at the ULPGC. His main research topics are Bayesian methods applied to Health Economics, economic evaluation and cost-effectiveness analysis, meta-analysis and equity in the provision of healthcare services.

The Health Journal May 12 2021 In a world where everyone seems to be an expert, constant notifications, health suggestions from friends and family, you need clarity not more comments. Have you ever tried to improve some health symptom by taking a vitamin, a supplement, or making a diet change and had unclear results? Have you ever felt that your health was being compromised by eating certain foods, environmental, or psychological factors? With The Health Journal you can turn those vague diet and supplement experiments into clear results. This symptom tracker is for the self experimenter, biohacker, and granular thinker who really wants to understand how different things are influencing their health. Let's face it you don't live in a bubble and there are a lot of confounding factors influencing your health from one day to the next like; travel, diet changes, mental factors, emotional influences, family changes. Get clarity on what is and what is not influencing your health with The Health Journal. The Health Journal is a system to both help identify what is causing your problem and track the effectiveness of any solutions. Many many times when I am trying to help people with health issues such as digestive or otherwise, I find that the reason they struggle is from uncertainty. Uncertainty on what is and is not working. Uncertainty about how their diet is affecting them, uncertainty about their sleep schedule, their digestion, when their worst time of day is or best time of day, etc, etc. Much of the office visit time is spent asking a lot of question that they are unsure of or do not know the answers to. This is the norm. Through asking question they start to pay closer attention to these things and better understand what is impacting their health. Through this, their health picture becomes clearer. With this clarity we can proceed to a solution with more certainty and much better results. This health tracker developed out of this clarity provoking process. Think of it as a way to help yourself and doctor better understand how different things are influencing your health. It will give you more certainty about how medicines, vitamins, supplements or diets are or are not helping you. Perhaps more important it can be used to further refine what the cause of your health issues are.

Health Economics Feb 09 2021 A textbook that combines economic concepts with empirical evidence to explain in economic terms how health care institutions and markets function. This book introduces students to the growing research field of health economics. Rather than offer details about health systems around the world without providing a theoretical context, Health Economics combines economic concepts with empirical evidence to enhance readers' economic understanding of how health care institutions and markets function. It views the subject in both microeconomic and macroeconomic terms, moving from the individual and firm level to the market level to a macroeconomic view of the role of health and health care within the economy as a whole. The book includes discussion of recent empirical evidence on the U.S. health system and can be used for an undergraduate course on U.S. health economics. It also contains sufficient material for an undergraduate or masters course on global health economics, or for a course on health economics aimed at health professionals. It includes a chapter on nurses as well as a chapter on the economics of hospitals and pharmaceuticals, which can be used in master's courses for students in these fields. It supplements its analysis with readings (both classic and current), extensive references, links to Web sites on policy developments and public programs, review and discussion questions, and exercises. Downloadable supplementary material for instructors, including solutions to the exercise sets, sample syllabuses, and more than 600 slides that can be used for class presentations, is available at http://mitpress.mit.edu/health_economics. A student solutions manual with answers to the odd-numbered exercises is also available.

Krebs fühlen Jul 14 2021 Preis der Leipziger Buchmesse 2020 Die Diagnose »Krebs« war früher ein Todesurteil. Heute ist dies nicht mehr der Fall. Es dauerte lange, bis Ärzte, Krankenschwestern, Krebspatienten und ihre Angehörigen sich auf ihre Gefühle einließen, die Krebskrankheiten auslösen: Zuversicht, Lebensangst, Lebensfreude, Verzweiflung, Mut, Trauer, Leid, Apathie. Bettina Hitzer schildert, wie es zu dieser Gefühlsrevolution in Medizin und Gesellschaft kam. Konfrontiert mit Krebs nehmen wir heute unseren menschlichen Körper anders wahr.

Krankheit, Behinderung, Leiden und Tod empfinden wir heute ganz anders, denn wir sind fähig, unsere Gefühle auszudrücken. Heute wird in Krankenhäusern, in Reha-Zentren und bei öffentlichen Kampagnen zur Früherkennung wie auch im Vier-Augen-Gespräch empathischer mitempfunden und dies den Patienten mitgeteilt. Bettina Hitzer schildert historische Zusammenhänge zwischen Krankheit und Gefühl, die bisher kaum beachtet werden. Einfühlsam, beispielhaft und ermutigend schildert sie diese bis heute unbemerkte Kulturgeschichte der Gefühle am Beispiel von Krebs, dem »König aller Krankheiten«. Diese Revolution der Gefühle hat die Medizin grundlegend verändert und die deutsche Gesellschaft erstaunlich gewandelt. Der Mensch steht im Mittelpunkt der Humanen Medizin, die von Technik, Maschinen und Programmen unterstützt wird, ohne unser Gesundheitssystem zu beherrschen. Gefühle helfen zu überleben und im eigenen Leben anzukommen. Gerade Krebserkrankungen zeigen, dass wir dem Leben nicht mehr Tage, aber unseren Tagen mehr Leben geben können – vor allem durch das, was wir empfinden.

Health Promotion: A Psychosocial Approach Jan 08 2021 "Stephens' important and timely book provides an urgently needed and insightful synthesis of the previously fragmented field of community health psychology. A wide range of case material from both rich and poor countries is framed within a skilfully articulated set of debates around core issues of theory, practice, research and ethics. This text should be compulsory reading for all practitioners and students of health promotion." Professor Catherine Campbell, Health, Community and Development Group, London School of Economics Can the health of individuals be improved through community health programmes? How can community health promotion programmes be more effective? How is health awareness measured and evaluated? In recent years, health promoters have focused their attention not just on individual lifestyle change, but on daily social and physical conditions that surround the individual. They are now looking towards lifestyle change based on community or socially-based interventions. This book argues for the importance of theoretical explanations that inform investigations of the social context of daily life, the social relations that affect opportunities for healthy lives, and the needs of communities. Examining theories from a critical and values oriented perspective, it looks at current theories of health and health promotion, and discusses why health inequalities exist. The book includes a practical grounding, using examples of community health promotion practice, such as community arts and local community models, based on material and research from Britain, New Zealand, Canada, the USA and South America. The media's role in health promotion is also investigated, drawing on current media theory and examining media representation and the public's interpretative response. Issues surrounding the evaluation of health promotion programmes are also discussed. **Health Promotion: A Psychosocial Approach** provides a critical and theoretical basis for practice in social and community approaches to health promotion. It is key reading for postgraduate students of health psychology or community psychology, as well as qualified practitioners in public health areas who are developing theory based community programmes.
