HDTV--advanced Television for the 1990s May 19 2021 Features technical overviews of the various competing HDTV and ATV systems that are currently under development (including a detailed analysis of the Zenith spectrum-compatible system) and assesses the strengths and weaknesses of each. Examines all aspects of the 1125-line system; equipment and colorimetric standards, transmission and modulation considerations, methods for coping with noise and other problems. Annotated and

Modularity in the Presence of Subclassing Sep 27 2019 Abstract: "Classes are harder to subclass than they need be. This report addresses this problem, showing how to design classes that are more modular and easier to subclass without sacrificing the extensibility that makes subclassing useful to begin with. We argue that a class should have two interfaces, an instance interface used by programmers manipulating instances of the class, and a specialization interface used by programmers building subclasses of the class. Instance interfaces are relatively well understood, but design principles for specialization interfaces are not. In the context of single inheritance we argue that specialization interfaces should be partitioned into class components. A class component groups part of a class's state together with methods to access that state. Class components establish abstraction boundaries within classes, allowing modular replacement of components by subclasses. Achieving this replacement requires reasoning about each component as an independent unit that depends only on the specifications of other components and not on their implementation. We introduce the concept of abstract representation to denote the view of a class's state given in its specialization interface. This view is more detailed than the view that describes instances of the class, revealing details that describe the interfaces between class components. It is less detailed than the actual implementation, hiding implementation details that should not be exposed even to specializers. We also consider multiple inheritance, specifically, Snyder's model of encapsulated multiple inheritance. We advocate separating class components into individual classes called mixins. Instantiable classes are built by combining multiple mixins. With the new style of design, class hierarchies have more classes than in equivalent single-inheritance designs. These classes have smaller, simpler interfaces and can be reused more flexibly. To explore the impact our ideas might have on program design, we consider classes from existing libraries in light of the proposed single- and multiple-inheritance methodologies. To explore the impact our ideas might have on language design, we present two different extensions to Java, one that provides a level of checking for single-inheritance designs, and another that adds the encapsulated model of multiple inheritance."

Public Expenditure and Sustainability of the Regional Agricultural Project Sierra Leone Apr 29 2021 A history and analysis of the public enterprise sector of the Pakistani economy, examined at the macro and microeconomic levels. Due to the unique character of Pakistani development and the lack of any comparative framework for analysis, this is recommended only for scholarly collections in the field. index. Distributed by Westview. An assessment of government expenditure policy and its impact on the sustainability of the development measures initiated by regional agricultural projects in Sierra Leone. Discussion of the study's conceptual framework and research methodology is followed by eight chapters covering development of the agricultural sector over the last decade; sustaining farm-level benefits and the development process at the regional level; and implications and recommendations for domestic policy and external donor assistance. Numerous appendices. Lack of annotation copyright by Book News, Inc., Portland, OR

United States-East European Relations in the 1990s Feb 19 2020 This volume is the result of a workshop on the future relations between the U.S. and each of the European countries, sponsored by the Hoover Institution on War, Revolution, and Peace. The contributors present political, economic and military surveys as well

country background papers. Beginning with the changing relations after 1985 between the Soviet Union and its client regimes, the volume covers Western policies to result in economic growth and stability, and the role of the Warsaw Treaty Organization. The authors analyze the domestic and foreign affairs of Poland, the Democratic Republic, Czechoslovakia, Romania, Bulgaria, Hungary, Yugoslavia, and Albania, and include projections for their future relationships with the United States. ISBN 0-8448-1612-4: \$47.50; ISBN 0-8448-1613-2 (pbk.): \$27.00.
