The Mauna Loa four wavelength nephelometer Mar 09 2020 Three years of high quality total light scattering data from a four-wavelength integrating nephelometer have been acquired at Mauna Loa Observatory as part of the Geophysical Monitoring for Climate Change (GMCC) program. These data may be representative of the upper troposphere under certain weather conditions and may therefore be used to deduce background global aerosol properties and their possible effect on climate. A light scattering value of about $b(\text{subscript sp}) (550 \text{ nm}) = 1077 \text{ m}^2$ appears to be a good estimate of the light scattering of aerosols during the cleanest background conditions at Mauna Loa Observatory.

The Code of Federal Regulations of the United States of America Oct 16 2020 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.
