The Handbook of the International Law of Military Operations Apr 09 2020 The second edition of this well received handbook provides a comprehensive overview and annotated commentary of those areas of international law most relevant to the planning and conduct of military operations. It covers a wide scope of military operations, ranging from operations conducted under UN Security Council mandate to (collective) self-defence and consensual and humanitarian operations and identifies the relevant legal bases and applicable legal regimes governing the application of force and treatment of persons during such operations. It also devotes attention to the law governing the status of forces, military use of the sea and airspace and questions of international (criminal) responsibility for breaches of international law. New developments such as cyber warfare and controversial aspects of law in relation to contemporary operations, such as targeted killing of specific individuals are discussed and analysed, alongside recent developments in more traditional types of operations, such as peacekeeping and naval operations. The book is aimed at policy officials, commanders and their (military) legal advisors who are involved with the planning and conduct of any type of military operation and is intended to complement national and international policy and legal guidelines and assist in identifying and applying the law to ensure legitimacy and contribute to mission accomplishment. It likewise fulfils a need in pertinent international organizations, such as the UN, NATO, Regional Organizations, and NGOs. It also serves as a comprehensive work of reference to academics and is suitable for courses at military staff colleges, academies and universities, which devote attention to one or more aspects of international law treated in the book. This mix of intended users is reflected in the contributors who include senior (former) policy officials and (military) legal advisors, alongside academics engaged in teaching and research in these areas of international law.

The Oxford Handbook of Criminal Process Mar 09 2020 The Oxford Handbook of Criminal Process surveys the topics and issues in the field of criminal process, including the laws, institutions, and practices of the criminal justice administration. The process begins with arrests or with crime investigation such as searches for evidence. It continues through trial or some alternative form of adjudication such as plea bargaining

that may lead to conviction and punishment, and it includes post-conviction events such as appeals and various procedures for addressing miscarriages of justice. Across more than 40 chapters, this Handbook provides a descriptive overview of the subject sufficient to serve as a durable reference source, and more importantly to offer contemporary critical or analytical perspectives on those subjects by leading scholars in the field. Topics covered include history, procedure, investigation, prosecution, evidence, adjudication, and appeal.

Day Sep 02 2019 Poetry. "I am spending my 39th year practicing uncreativity. On Friday, September 1, 2000, I began retyping the day's NEW YORK TIMES word for word, letter for letter, from the upper left hand corner to the lower right hand corner, page by page." With these words, Kenneth Goldsmith embarked upon a project which he termed "uncreative writing", that is: uncreativity as a constraint-based process; uncreativity as a creative practice. By typing page upon page, making no distinction between article, editorial and advertisement, disregarding all typographic and graphical treatments, Goldsmith levels the daily newspaper. DAY is a monument to the ephemeral, comprised of yesterday's news, a fleeting moment concretized, captured, then reframed into the discourse of literature. "When I reach 40, I hope to have cleansed myself of all creativity"-Kenneth Goldsmith.

The Law of Targeting Jul 05 2022 Targeting is the primary method for securing strategic objectives in an armed conflict. Failure to comply with the law of targeting jeopardizes the achievement of those aims. It is therefore essential that all those involved in or studying issues surrounding targeting have an accurate and complete understanding of this area of law. This book offers the definitive and comprehensive statement of all aspects of the law of targeting. It is a 'one-stop shop' that

answers all relevant questions in depth. It has been written in an open, accessible yet comprehensive style, and addresses both matters of established law and issues of topical controversy. The text explains the meanings of such terms as 'civilian', 'combatant', and 'military objective'. Chapters are devoted to the core targeting principles of distinction, discrimination, and proportionality, as well as to the relationship between targeting and the protection of the environment and of objects and persons entitled to special protection. New technologies are also covered, with chapters looking at attacks using unmanned platforms and a discussion of the issues arising from cyber warfare. The book also examines recent controversies and perceived ambiguities in the rules governing targeting, including the use of human shields, the level of care required in a bombing campaign, and the difficulties involved in determining whether someone is directly participating in hostilities. This book will be invaluable to all working in this contentious area of law.

Handbook of Radiotherapy Physics Feb 06 2020 From the essential background physics and radiobiology to the latest imaging and treatment modalities, the updated second edition of Handbook of Radiotherapy Physics: Theory & Practice covers all aspects of the subject. In Volume 1, Part A includes the Interaction of Radiation with Matter (charged particles and photons) and the Fundamentals of Dosimetry with an extensive section on small-field physics. Part B covers Radiobiology with increased emphasis on hypofractionation. Part C describes Equipment for Imaging and Therapy including MR-guided linear accelerators. Part D on Dose Measurement includes chapters on ionisation chambers, solid-state detectors, film and gels, as well as a detailed description and explanation of Codes of Practice for Reference Dose Determination including detector correction factors in small fields. Part E describes the properties of Clinical (external) Beams. The various methods (or

'algorithms') for Computing Doses in Patients irradiated by photon, electron and proton beams are described in Part F with increased emphasis on Monte-Carlo-based and grid-based deterministic algorithms. In Volume 2, Part G covers all aspects of Treatment Planning including CT-, MR- and Radionuclide-based patient imaging, Intensity-Modulated Photon Beams, Electron and Proton Beams, Stereotactic and Total Body Irradiation and the use of the dosimetric and radiobiological metrics TCP and NTCP for plan evaluation and optimisation. Quality Assurance fundamentals with application to equipment and processes are covered in Part H. Radionuclides, equipment and methods for Brachytherapy and Targeted Molecular Therapy are covered in Parts I and J, respectively. Finally, Part K is devoted to Radiation Protection of the public, staff and patients. Extensive tables of Physical Constants, Photon, Electron and Proton Interaction data, and typical Photon Beam and Radionuclide data are given in Part L. Edited by recognised authorities in the field, with individual chapters written by renowned specialists, this second edition of Handbook of Radiotherapy Physics provides the essential up-to-date theoretical and practical knowledge to deliver safe and effective radiotherapy. It will be of interest to clinical and research medical physicists, radiation oncologists, radiation technologists, PhD and Master's students.

How Ireland Voted 2016 Nov 16 2020 This book is the definitive analysis of the 2016 Irish general election and is the eighth book in the well-established How Ireland Voted series. The 2011 election in Ireland was characterised as an earthquake, but the aftershocks visible in the 2016 election were equally dramatic. This election saw the rout of the government that had presided over a remarkable economic recovery, and marked a new low for the strength of the traditional party system, as smaller parties and independents attracted almost half of all votes. The first chapter sets the context, and later ones investigate the extent to which the outgoing government fulfilled its 2011 pledges, and how candidates were selected. The success or otherwise of campaign strategies is assessed, the results and the behaviour of voters are analysed, and the aftermath, when it took a record length of time to form a government, is explored. Other chapters examine the consequence of new gender quotas for candidate selection, consider the reasons for the unusual success of independents, and reflect on the implications. The book also reveals intriguing insights into the candidates' experiences of the election, both successful and unsuccessful. It will be of use to students, teachers and scholars of Irish politics, as well as the wider reader interested in Irish politics and elections.

Barriers to Growth in Small Firms Aug 02 2019 This book, originally published in 1989, studies both the growth and the barriers to growth of small firms. It examines market and industrial structures, also the role of investment institutions and their handling of small business accounts. There are chapters on management attitudes and ability considered as a potential barrier to development, and other problems such as lack of finance and of a suitably qualified workforce. The book stresses the importance of communicating the latest advances in technology to small firms, and urges the need to re-think government tax and procurement policies.
