Village Phone Replication Manual Jul 25 2021 Why is it such a challenge to provide telecommunications to rural areas? High initial infrastructure investment, relative low call volumes, high maintenance costs due to harsh environments, cash box collection needs, cash security costs (for coin operated phones), card availability (for prepaid airtime systems), technical illiteracy, remote locations, and high transportation costs are just some of the impediments to providing rural telecommunications access. This manual is based on the experiences of the Village Phone Programmes in Bangladesh and Uganda. In rural villages where no telecommunications services have previously existed, the programme provides cellular phones via a sustainable financing mechanism to poor entrepreneurs who use the phone to operate a business. Such has been the success that over 2,000 village phone businesses are now operating in remote villages of Uganda. This manual is a guideline for replicating the programme in a new country. It establishes a template for creating sustainable initiatives that bring telecommunications to the poor, create viable new businesses for micro-entrepreneurs, and expand the customer base for telecommunications companies.

Use and Effect of Declarative Information in User Instructions Jan 31 2022 Apart from the procedural information that describes how a device should be operated, instructions for use include different types of declarative information, such as information about the internal working of the device (system information) and information about the circumstances in which the different functions can be used (utilization information). In this study, the use and the effects of system and utilization information are investigated in a number of experiments. The results demonstrate that users spend a considerable amount of time on reading each information type. However, contrary to common belief, system information has only limited effects; utilization information does not affect task performance at all. Moreover, users of instructions without declarative information are more confident in their ability to learn to work with the device and consider the learning process less difficult than users of instructions with declarative information. These results suggest that users of instructions without system and utilization information are capable to use other information sources such as the procedural information and the interface of the device to derive the required declarative knowledge.

Mobile Phone Panel Surveys in Developing Countries Dec 30 2021 Household survey data are very useful for monitoring living conditions of citizens of any country. In developing countries, a lot of this data are collected through "traditional" face-to-face household surveys. Due to the remote and dispersed nature of many populations in developing countries, but also because of the complex nature of many survey questionnaires, collection of timely welfare data has often proved expensive and logistically challenging. Yet, there is a need for faster, cheaper to collect, lighter, more nimble data collection methods to address data gaps between big household surveys. The recent proliferation of mobile phone networks has opened new possibilities. By combining baseline data from a traditional household survey with subsequent interviews of selected respondents using mobile phones, this facilitates welfare monitoring and opinion polling almost real time. The purpose of this handbook is to contribute to the development of the new field of mobile phone data collection in developing countries. The handbook documents how this innovative approach to data collection works, its advantages and challenges. The handbook draws primarily from the authors' first-hand experiences with mobile phone surveys in Africa and also benefits from experiences elsewhere. It is intended to serve a diverse audience including those involved in collecting (representative) data using mobile phones, and those using data collected through this approach. For those who will be implementing a mobile phone panel survey, the different chapters guide them through every stage of the implementation process. For potential users of the data collected via mobile phone technology, the handbook presents a new approach to data collection which they can use for monitoring programs and facilitate almost real time decision-making. A further purpose of this book is to contribute to the debate regarding the advantages of the method as well as the challenges associated with it.

How to Conduct In-Person Interviews for Surveys Nov 04 2019 'The discussion of qualitative interviewing is a good addition, and the discussion of translating survey questions is very good.' 'Juanita M. Firestone, University of Texas, San Antonio' 'The security of data and the transitions sections are very useful for students.' 'Dan Johnson, University of North Carolina, Wilmington' 'When should you use an in-person interview for a survey? How do you train the interviewers as well as the programmers for computer-assisted interviews (CAPI)? How do you deal with refusals to be interviewed? Aimed at answering these questions and more, this carefully written, friendly book will help you prepare and administer effective in-person survey interviews. Beginning with the administrative considerations involved in setting up in-person interviews, Oishi explains how to: write interview questions from a flowing interview script with appropriately placed transition statements through to the preparation of useful visual aids; design an eligibility screen; write preletters and scripts for a precall; develop job descriptions for interviewers as well as design interviewer training sessions; record and correct response errors in paper and CAPI interviews; and, clean the data. Completely revised, the book also includes coverage of: '+ Cultural considerations for in-person interviews'+ Translation of interviews into other languages'+ Differences in quantitative and qualitative interview styles'+ How to train CAPI interviews as well as the program instructions'+ Expanded coverage of the role of the supervisor, including a sample of a full training manual'+ Methods for creating an appropriate environment for in-person interviews, including how to dress and talk to people'+ Updated coverage of informed consent, including a sample of a consent form' 'The text is very readable and conveys a tremendous amount of information. There is good

use of checklists that are clear, easy to read and appropriate as well as good examples. The references to the literature provide good resources for those who need more.'''Carol J. Lancaster, Medical University of South Carolina''''

INTRODUCTION 1-1.1 Purpose. This chapter provides a general history of the development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.
