Efficiency, Accountability, and Equity Aug 14 2020 How efficient is Title I, the largest federal educational program in elementary and secondary schools? What is the quality of the Title I services? Has Title I promoted equity in schools among our

nation's low-income areas? To address these important issues, this volume draws on the proceedings of two national invitational conferences, sponsored by the mid-Atlantic regional educational laboratory, the Laboratory for Student Success (LSS) at Temple University Center for Research in Human Development and Education in 1999 and 2000. These conferences aim to provide research-based information on how Title I schoolwide programs affect teaching, learning, and student outcomes and to strengthen cost-benefits in Title I program implementation to assist students in high-poverty schools. The focus of the conferences is particularly timely in view of the upcoming Title I reauthorization and the recently enacted federal Comprehensive School Reform Demonstration (CSR D) initiative. Discussion at the conferences focused on enhancing our understanding of accountability, efficiency, and equity issues in Title I. More specifically, researchers at the two conferences: (a) highlighted findings from the National Study of Effective Title I Schoolwide Programs; (b) examined the effects of research-based comprehensive reform models in high-poverty schools; and (c) addressed cross-cutting issues such as the productivity of Title I programs, the use of technologies in the classroom, the role of the state in strengthening Title I programs, cost effectiveness of whole school reform, professional development, reading instruction, and parental involvement, which are important parts of the national educational reform agenda. Leading researchers, policymakers, and practitioners were commissioned to develop preconference papers to serve as a springboard for discussion at the conferences. These papers included an overview of the research base and patterns of governance and conditions that lead to effective implementation of Title I schoolwide programs. The papers were reviewed by conference participants before the conferences and were used to develop next-step recommendations for advancing the implementation of the Title I schoolwide provision.

Dependent Data in Social Sciences Research Oct 28 2021 This volume presents contributions on handling data in which the postulate of independence in the data matrix is violated. When this postulate is violated and when the methods assuming independence are still applied, the estimated parameters are likely to be biased, and statistical decisions are very likely to be incorrect. Problems associated with dependence in data have been known for a long time, and led to the development of tailored methods for the analysis of dependent data in various areas of statistical analysis. These methods include, for example, methods for the analysis of longitudinal data, corrections for dependency, and corrections for degrees of freedom. This volume contains the following five sections: growth curve modeling, directional dependence, dyadic data modeling, item response modeling (IRT), and other methods for the analysis of dependent data (e.g., approaches for modeling cross-section dependence, multidimensional scaling techniques, and mixed models). Researchers and graduate students in the social and behavioral

sciences, education, econometrics, and medicine will find this up-to-date overview of modern statistical approaches for dealing with problems related to dependent data particularly useful.

The Algebra Solution to Mathematics Reform Mar 09 2020 How can we increase mathematics achievement among all students? This book provides a straightforward explanation of how changing mathematics tracking policies to provide algebra instruction to all students by at least eighth grade can bring about changes in both student achievement and teacher performance. Spielhagen chronicles the success of a large school district that changed the way mathematics was delivered and increased success rates across all populations. Featuring interviews with students and teachers, the author shows how all stakeholders were brought into the process of changing policy from the ground up. Offering a model for success that can be replicated by other districts, this resource: Provides a comprehensive account of how mathematics policy that evolved in the United States over the last century has resulted in low math literacy among our population. Addresses the recommendations and counterpoints to the report of the National Mathematics Panel (2009). Includes real-life examples of how stakeholders responded to the policy change that revolutionized mathematics instruction in their district. Frances R. Spielhagen is associate professor of education and director of the Center for Adolescent Research and Development at Mount Saint Mary College, Newburgh, New York. “Offers an ‘elegant solution’ to a compelling problem in American society that has global implications: Who should study algebra and when? The best-practices approach should be required reading for pre-service and in-service educators and administrators alike. Readers will recognize that preparing students to learn algebra by 8th grade is as much a right as learning to read. It is a right upon which our future depends.” —Susan G. Assouline, Professor of School Psychology, Associate Director, The Connie Belin & Jacqueline N. Blank International Center for Gifted Education and Talent Development, The University of Iowa “Frances Spielhagen’s book offers a thoughtful and detailed response to one of the most important questions of our time—should all students take algebra in 8th grade? With impressive and thorough research, the author considers issues of teaching and learning, as well as curriculum and policy. For all those who care about the mathematical future of our nation’s children, this book is a must read.” —Jo Boaler, Professor of Mathematics Education, Stanford University, The School of Education “In *The Algebra Solution to Mathematics Reform*, Frances R. Spielhagen shows vividly and precisely how a public school system teaches children to master mathematics skills early—culminating in 8th grade algebra, a critical subject for high school graduation and college admission. Spielhagen’s book precisely demonstrates how to improve real sequential learning for students from the early grades to high school graduation, and successfully into college and life. Thus, this vital book has implications for instruction in all academic subjects, providing a living model for continuity and improvement of student learning.” —Bruce S. Cooper, Professor, Graduate School of Education, Fordham University

Learner Performance in South Africa Dec 06 2019 South Africa has done well to systematically expand its educational system and to lengthen the schooling experience of successive learner cohorts. But the quality of the output from the school system has been questioned. In seeking to identify the reasons for this, it is important to relate educational outputs (competencies, as measured for instance by examinations or standardized tests) to inputs. Determining the relative contributions of the inputs - of the school, the household and the individual learner - to educational outputs is not straightforward, particularly since very little educational production function analysis has been undertaken in South Africa. Until recently, no South African school data has incorporated test results, school characteristics and information on the household circumstances of individual learners necessary for this kind of analysis. However, the results from a survey of a sample of schools involved in the large-scale Quality Learning Project (QLP), funded by the Business Trust, have yielded such data. The QLP data set offers a new analytical opportunity to address the question: What are the effects of social and economic variables on educational outcomes in the QLP schools?

Enhancing Educational Excellence, Equity and Efficiency Aug 26 2021 Promoting high standards in education while striving for equal opportunities under the budget constraints - these are the new global objectives of education systems. This book brings together research-based evidence on the effectiveness of major Australian, Dutch, and UK improvement efforts in education at both primary and secondary level, whilst making comparisons with similar US initiatives. The book addresses several major questions in this new environment. Those questions include: how to combat educational disadvantages, how to integrate pupils with special educational needs in regular education, how to implement educational standards initiatives, how to restructure secondary education, how to implement decentralized policy-making, and how to implement a class size reduction initiative. Finally, the authors suggest directions for future research in order to increase our understanding of what works in education and why.
