*Raising Entrepreneurial Capital* Jan 04 2020 *Raising Entrepreneurial Capital* begins where entrepreneurship books leave off. This book provides a broad, high-level discussion of the financing decisions that companies must make to achieve success. With a focus on classic capital raising, the text covers the debt vs. equity decision, as well as the options available to smaller businesses. It also describes the factors that lead to rapid growth, including venture capital, IPOs, angels, incubators, and much more. Combining solid theory with practitioner's experience and insights, this book should increase student understanding of how to raise entrepreneurial capital. It explains how your company should position itself to attract private equity investment, and what steps you can take to improve your company's marketability. It includes several chapters on worldwide regional variations on forms and availability of pre-seed capital, incubators, and the business plans they create, with case-studies from Europe, Latin America, and the Pacific Rim. It also effectively differentiates between venture capital and entrepreneurial capital. This book will appeal to entrepreneurs and to students in Entrepreneurship programs, particularly entrepreneurial finance courses. \* Combines solid theory with practitioner's experience and insights \* Case studies illustrate theory throughout the book \* Describes worldwide and regional variations in capital raising strategies

**Managing the Telecommuting Employee** Jan 16 2021 A bigger and bigger part of the workforce is telecommuting. And managers need new skills to get the most out of this increasingly far-flung staff. This indispensable guide includes case studies, checklists, and sample forms and charts. It shows managers how to use teleconferencing technology to communicate with distanced workers, make the best use of scheduling software to monitor productivity, and even end the arrangement if it's not working. One of the best ways for companies to save money in lean times is to send their employees home to work. But that requires a different kind of workforce and a different kind of management. This book shows how to make the long-distance relationship work for everyone!

**Domain-Specific Modeling** Jul 02 2022 "[The authors] are pioneers. . . Few in our industry have their breadth of knowledge and experience." —From the Foreword by Dave Thomas, Bedarra Labs Domain-Specific Modeling (DSM) is the latest approach to software development, promising to greatly increase the speed and ease of software creation. Early adopters of DSM have been enjoying productivity increases of 500-1000% in production for over a decade. This book introduces DSM and offers examples from various fields to illustrate to experienced developers how DSM can improve software development in their teams. Two authorities in the field explain what DSM is, why it works, and how to successfully create and use a DSM solution to improve productivity and quality. Divided into four parts, the book covers: background and motivation; fundamentals; in-depth examples; and creating DSM solutions. There is an emphasis throughout the book on practical guidelines for implementing DSM, including how to identify the necessary language constructs, how to generate full code from models, and how to provide tool support for a new DSM language. The example cases described in the book are available the book's Website, [www.dsmbook.com](http://www.dsmbook.com), along with, an evaluation copy of the MetaEdit+ tool (for Windows, Mac OS X, and Linux), which allows readers to examine and try out the modeling languages and code generators. Domain-Specific Modeling is an essential reference for lead developers, software engineers, architects, methodologists, and technical managers who want to learn how to create a DSM solution and successfully put it into practice.

**Building Telecom Markets** Jan 28 2022 The mobile telecommunication industry has been one of the fastest growing industries in the global economy since the late 1990s. As the first country to offer commercial Code Division Multiple Access (CDMA) cellular service in the world, Korea was able to jump right into the digital mobile markets, enhancing its status as a leading manufacturer of mobile equipment. While the growth of the telecom industry occurred with the emergence of worldwide market-oriented regulatory reform and liberalization in telecommunications, the state-market relationship in Korea evolved from state monopoly toward "centralized governance" and later toward "flexible governance," which is substantially different from "liberal governance" of the US. This book examines the uniqueness of Korean regulatory reforms of the mobile telecommunication sector, and argues that the market-oriented regulatory reform and liberalization should be explained by focusing on the interactions among the state, the private sector, and international political economic environment. It will appeal to scholars and policy-makers alike concerned with market regulation, Asian development and political economy.

**The Business of Electronics** Apr 30 2022 Electronics is an ever-changing field with an entrepreneurial spirit and a rich history, populated by some of the world's most famous companies and personalities. The Business of Electronics details the field's complex ecosystem in all its trials and tribulations. It looks at companies such as Apple, IBM, Samsung, and Nokia, as well as now-extinct companies such as Honeywell Bull (France) and Sinclair Computers (UK) that contributed to technology and business. Sethi shows us how a handful of US companies led the charge in designing equipment that could make millions of small, reliable components; how Nokia started in the timber business; the history of inventors like J.C. Bose, a pioneer in radio communication (who inadvertently made Guglielmo Marconi famous); and why there are numerous companies and creators that never made it or that we have never heard of. This all-encompassing book not only explores the vibrant history of electronics, it uses case studies to examine the companies and people that made history and explain how we ended up where we are today.

**Disruptive Innovation in Chinese and Indian Businesses** Oct 01 2019 With the rapid development of China and India as new economic powers in global competition, an obvious question is whether these emerging economies are great opportunities or threats. Whilst answers are bound to differ depending on one's perspective, it is increasingly clear that more local firms, especially local entrepreneurs, from these emerging economies will play a more critical role in global competition by becoming challengers to global incumbents. Indeed, the fact that the majority of their populations are at the bottom of the pyramid, and thus cannot afford products designed for the developed markets, has made these emerging economies fertile ground for developing and applying disruptive innovations. A novel mix of key attributes distinctive from those of established technologies or business models, disruptive innovations are typically inferior, yet affordable and "good-enough" products or services, which originate in lower-end market segments, but later move up to compete with those provided by incumbent firms. This book sheds new light on disruptive innovations both from and for the bottom of the pyramid in China and India, from the point of view of local entrepreneurs and international firms seeking to operate their businesses there. It covers both the theoretical and practical implications of disruptive innovation using conceptual frameworks alongside detailed case studies, whilst also providing a comparison of conditions and strategic options in India and China. Further, unlike existing studies, this book focuses on the neglected perspective of local challengers as the

primary players, and in doing so reveals the extent to which the future landscape of global competition may be shaped by disruptive innovation, as well as its capacity to make the world "flatter" and more sustainable.

This unique book will be valuable to both scholars and practitioners interested in disruptive innovation and those working in the fields of Asian studies, international business, economics and globalization.
