1905 11946 efficientnet rethinking model scaling for Sep 03 2022 28 05 2019 convolutional neural networks convnets are commonly developed at a fixed resource budget and then scaled up for better accuracy if more resources are available in this paper we systematically study model scaling and identify that carefully balancing network depth width and resolution can lead to better performance based on this observation we propose a

you only look once unified real time object detection Aug 02 2022 08 06 2015 we present yolo a new approach to object detection prior work on object detection repurposes classifiers to perform detection instead we frame object detection as a regression problem to spatially separated bounding boxes and associated class probabilities a single neural network predicts bounding boxes and class probabilities directly from full images
