The Cockroach Combat Manual II Jun 02 2022 In the early 1980s, the author and his associates were evaluating a new cockroach control product in a high-rise housing project. Cockroach populations were high, even though the apartment they were in was squeaky clean. The three small children that shared a twin bed there looked different, but no one was sure why. Dr. Frishman pointed out that they didn't have any eyebrows or lashes, and then he exposed thousands of roaches hiding behind the headboard. Some things you never forget. Having Paul Bello, an industry expert himself with years of practical experience, team up with Dr. Cockroach makes **The Cockroach Combat Manual II** a must-read because cockroach control is deserving of our best efforts.

Coffee Rust: Epidemiology, Resistance and Management Sep 05 2022 This highly informative monograph will provide a basic reference on coffee rust for both investigators in the field and those entering it. The research conducted has been organized based on principles of epidemiology and plant disease management, providing both theoretical and practical information. This approach enables discussion of the past, present and future of coffee rust research in broad plant patholog-ical areas of biology, epidemiology, genetics and breeding for disease resistance, fungicide technology and application, and disease management. In addition, an analysis of epidemics, breeding programs, and other rust management practices in India, Kenya and Brazil are included. This new text will contain over 45 figures and 40 tables for both investigators in the field and those just entering it.

Coffee Is Not Forever Oct 14 2020 The global coffee industry, which fuels the livelihoods of farmers, entrepreneurs, and consumers around the world, rests on fragile ecological foundations. In **Coffee Is Not Forever**, Stuart McCook explores the transnational story of this essential crop through a history of one of its most devastating diseases, the coffee leaf rust. He deftly synthesizes agricultural, social, and economic histories with plant genetics and plant pathology to investigate the increasing interdependence of the world's coffee-producing zones. In the process, he illuminates the progress and prognosis of the challenges—especially climate change—that pose an existential threat to a crop that global consumers often take for granted. And finally, in putting a tropical plant disease at the forefront, he has crafted the first truly global environmental history of coffee, pushing its study and the discipline in bold new directions.

Genomic Designing for Biotic Stress Resistant Technical Crops Nov 02 2019 Biotic stresses cause yield loss of 31-42% in crops in addition to 6-20% during post-harvest stage. Understanding interaction of crop plants to the biotic stresses caused by insects, bacteria, fungi, viruses, and oomycetes, etc. is important to develop resistant crop varieties. Knowledge on the advanced genetic and genomic crop improvement strategies including molecular breeding, transgenics, genomic-assisted breeding and the recently emerging genome editing for developing resistant varieties in technical crops is imperative for addressing FHEE (food, health, energy and environment) security. Whole genome sequencing of these crops followed by genotyping-by-sequencing have facilitated precise information about the genes conferring resistance useful for gene discovery, allele mining and shuttle breeding which in turn opened up the scope for 'designing' crop genomes with resistance to biotic stresses. The 15 chapters dedicated to 13 technical crops and 2 technical crop groups in this volume will deliberate on different types of biotic stress agents and their effects on and interaction with crop plants; will enumerate on the available genetic diversity with regard to biotic stress resistance among available cultivars; illuminate on the potential gene pools for utilization in interspecific gene transfer; will brief on the classical genetics of stress resistance and traditional breeding for transferring them to their cultivated counterparts; will enunciate the success stories of genetic engineering for developing biotic stress resistant varieties; will discuss on molecular mapping of genes and QTLs underlying biotic stress resistance and their marker-assisted introgression into elite varieties; will enunciate on different emerging genomics-aided techniques including genomic selection, allele mining, gene discovery and gene pyramiding for developing resistant crop varieties with higher quantity and quality; and will also elaborate some case studies on genome editing focusing on specific genes for generating disease and insect resistant crops.

Landscapes Of Bacchus Jun 29 2019 In a country of disparate parts and of long, unbroken historical experience, there may be one dominant feature, a clue to the character of its regions. In Portugal the vine serves as this clue. The vine has been an important aspect of the Iberian landscape since prehistoric times, and farmers still use Roman methods of cultivation that have been adapted to regional physical conditions and to socioeconomic structure. Southern Portugal today is almost vineless, but in the north three areas can be distinguished by their vine forms and their products. Dan Stanislawski examines these areas in detail. High tree-vines surround plots of grain in the Minho Province. The grains and the slightly acid Green Wines provide subsistence and cash for the densely settled area of owner-operated small farms. In the hanging garden terrace of the Douro, vines grown on tawny, baked schist slopes yield world-famous Port Wine, a product that must conform to strict quantity and quality controls supervised by the central government. Mature table wines are produced in the Dão, an isolated cul-de-sac where cordons of vines are planted on small, individually owned plots. Control of wine-making is exercised by a central governing group and by producers' cooperatives. Various wines originate in central Portugal. The lesser demarcated zones of Setubal, Colares, Carcavelos, and Bucelas yield fine wines. In other parts of the central region several wine types are produced in bulk. Some are used for blending and some for aging into quality table wines, but none is distinguished as a wine whose character is derived from its geographical location. Dan Stanislawski demonstrates that vine form differences—and differences in the resulting product, wine—mirror the Portuguese historical experience and indicate regional distinctions in Portuguese life styles.

Biomedical Engineering, Trends in Electronics Jul 31 2019 Rapid technological developments in the last century have brought the field of biomedical engineering into a totally new realm. Breakthroughs in material science, imaging, electronics and more recently the information age have improved our understanding of the human body. As a result, the field of biomedical engineering is thriving with new innovations that aim to improve the quality and cost of medical care. This book is the first in a series of three that will present recent trends in biomedical engineering, with a particular focus on electronic and communication applications. More specifically: wireless monitoring, sensors, medical imaging and the management of medical information.

Variable Neighborhood Search Aug 12 2020 This volume constitutes the proceedings of the 8th International Conference on Variable Neighborhood Search, ICVNS 2021, held in Abu Dhabi, United Arab Emirates, in March 2021. The 14 full papers presented in this volume were carefully reviewed and selected from 27 submissions. The papers describe recent advances in methods and applications of variable neighborhood search. Chapter "Reduced Variable Neighbourhood Search for the Generation of Controlled Circular Data" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.
