Air Pollution Sep 11 2020 Whether considered a threat to the health of humans in particular or of the ecosystem in general, problem of air pollution affects us all. In addition to the 189 chemicals listed in the air toxins category of the 1990 Clean Air Amendments, smog, acid rain, ozone depletion, and global warming all arise from air pollution. You can debate the prime cause, excessive lumbering or changes in the weather ó but the diminishing rainforest and the spreading desert speak for themselves. Pollution addresses the sources and results of these problems, and how they influence the environment. It surveys all aspects of management, including dispersion modeling, emission measurements, air quality and continuous emission monitoring, remote and stack sampling. In addition, the book explores methods of reduction and control, with particular attention to gaseous emissions controls and odor control. This stellar resource addresses the prevention of pollution created by existing technology, and the future zero-emissions technology. A useful guide for engineers, students or anyone working for environmental protection, Air Pollution provides a solid foundation and presents a sound environmental philosophy. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

Exercises in Rethinking Innateness Aug 30 2019 This book is the companion volume to Rethinking Innateness: A Connectionist Perspective on Development (The MIT Press, 1996), which proposed a new theoretical framework to answer the question "What does it mean to say that a behavior is innate?" The new work provides concrete illustrations—in the form of computer simulations—of connectionist models that are particularly relevant to cognitive development. This enables the reader to pursue in depth some practical and empirical issues raised in the first book. The authors' larger goal is to demonstrate the usefulness of neural network modeling as a research methodology. The book comes with a complete software package, including demonstration projects, neural network simulations on both Macintosh and Windows 95. It also contains a series of exercises in the use of the neural network simulator provided with the book. The software is also available to run on a variety of UNIX platforms.

Principles of Security and Trust Dec 03 2019 This book constitutes the refereed proceedings of the 4th International Conference on Principles of Security and Trust, POST 2015, held as part of the European Joint Conferences on Theory and Practice of Software, ETAPS 2015, in London, UK, in April 2015. The 17 regular papers presented in this volume were carefully reviewed and selected from 57 submissions. In addition, one invited talk is included. The papers have been organized in topical sections on information flow security types, risk assessment and security policies, protocols, hardware and physical security and privacy and voting.

Collaborative Policing May 20 2021 "The chapters in this book reveal that police education, training, and practices are now closely tied to collaboration between police, academics, professional practitioners, and community agencies, and such collaboration is described and evaluated." Handbook of Metallurgical Process Design Jan 01 2019 Reviewing an extensive array of procedures in hot and cold forming, casting, heat treatment, machining, and surface engineering of steel and aluminum, this comprehensive reference explores a vast range of processes relating to metallurgical component design-enhancing the production and the properties of engineered components while reducing manufacturing costs. It surveys the role of computer simulation in alloy design and its impact on material structure.

mechanical properties such as fatigue and wear. It also discusses alloy design for various materials, including steel, iron, aluminum, magnesium, titanium, super alloy compositions and copper.

Data Analytics and Applications of the Wearable Sensors in Healthcare February 2019 This book provides a collection of comprehensive research articles on data analytics and applications of wearable devices in healthcare. This Special Issue presents 28 research articles from 137 authors representing 37 institutions from 19 countries. To facilitate the understanding of the research articles, we organized the book to show various aspects covered in this field, such as eHealth, technology-integrated research, prediction, rehabilitation studies, prototype systems, community health studies, ergonomics design systems, technology acceptance model, evaluation studies, telemonitoring systems, warning systems, application of sensors in sports studies, clinical systems, feasibility studies, geographical location based systems, tracking systems, observational studies, risk assessment studies, human activity recognition systems, impact measurement systems, and a systematic review. We would like to take this opportunity to invite high quality research articles for our next Special Issue entitled "Digital Health and Smart Sensors for Better Management of Cancer and Chronic Diseases" as a part of Sensors journal.

Explorations in College Algebra March 30 2019 This innovative book, the product of an NSF-funded grant, leads the way in revitalizing college algebra. It offers the fundamentals of college algebra using an approach readers can relate to and use throughout their lives.

The book contains essays which correlate to the materials to allow for a qualitative understanding of algebra.

Perspectives in Civil Engineering Oct 01 2019 This report contains 27 papers that serve as a testament to the state-of-the-art engineering at the outset of the 21st century, as well as to commemorate the ASCE's Sesquicentennial. Written by the leading practitioners, educators, and researchers of civil engineering, each of these peer-reviewed papers explores a particular aspect of engineering knowledge and practice. Each paper explores the development of a particular civil engineering specialty, including milestones and future barriers, constraints, and opportunities. The papers celebrate the history, heritage, and accomplishments of the profession in all facets of practice, including construction facilities, special structures, engineering mechanics, surveying and irrigation and water quality, forensics, computing, materials, geotechnical engineering, hydraulic engineering, and transportation engineering. While each paper is unique, collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come. Together the papers illuminate the mounting complexity facing civil engineering stemming from rapid growth in scientific knowledge, technological development, and human populations, especially in the last 50 years. An overarching theme is the need for systems-level approaches and consideration from undergraduate education through advanced engineering materials, processes, technologies, and design methods and tools. These papers speak to the need for civil engineering specialties to recognize and embrace the growing interconnectedness of the global infrastructure, economy, society, and the work for more sustainable, life-cycle-oriented solutions. While embracing the past and the present, the papers collected here have an eye on the future needs of ASCE and the civil engineering profession.

Review of the New York City Watershed Protection Program Apr 08 2021 New York City's municipal water supply system provides about 1 billion gallons of drinking water a day to over 8.5 million people in New York City and about 1 million people living in Westchester, Putnam, Ulster, and Orange counties. The combined water supply system includes 19 reservoirs and three canals with a total storage capacity of approximately 580 billion gallons. The city's Watershed Protection Program is intended to maintain and enhance the high quality of these surface water sources. Review of the New York City Watershed Protection Program assesses the efficacy and future of New York City's watershed management activities. The report identifies program areas that may require change or action, including continued efforts to address turbidity and responding to changes in reservoir water quality as a result of climate change.

A Combined Data and Power Management Infrastructure for Small Satellites Jun 08 2020 This book describes the development and design of a unique combined data and power management infrastructure. The use in small satellites gives some particular requirements to the system, including potential hardware failure robustness and handling of different types of external analog and digital interfaces. These requirements lead to a functional merge between On Board Computer and the satellite's Power Control and Distribution Unit, which results in an innovative design and even a patent affiliation. This book provides system engineers and university students with the technical knowledge as well as a mix between technical brochure and a user guide.
