Present State and Future Needs in General Practice Sept 05 2022 In the sixth edition of this work John Fry has reverted to the format of the earlier editions published in 1965, 1970 and 1973 and has presented statistics drawn widely from many sources. General practice in the United Kingdom and elsewhere throughout the world has undergone many changes in the past decade. This new edition brings the available statistical information up to date and indicates the way ahead. General practice, the College and the National Health Service have been closely linked in effecting change. The membership of the College continues to grow and its influence on the face of general practice in the United Kingdom is significant. John Fry's new book presents that characteristic blend of fact and personal opinion which was so successful in earlier editions and so valuable to general practitioners and others in primary health care. Once again he has shown what can be achieved by one man based on his own work and those of others in general practice. John Lawson RCGP, 1983 President of the Royal College of General Practitioners vi Preface The Present State and Future Needs series had its roots in the dark days of the early 1960s when morale in general practice was low and when numbers of new entrants were actually falling. They were the days of mass emigration of doctors from Britain and the National Health Service was in its infancy and fifth editions were entitled Trends in General Practice (1977 and 1979).

Reconstructing Medical Practice 31 2019 Reconstructing Medical Practice examines how doctors see their care and their place in it, why they remain in medicine and why they are limited in their ability to lead the current system. Doctors are beset by doubts and feel rejected by systems where they should be. They see their role as 'flog[ging] a derelict system to get the last breath of workability out ... for their patients simply turn away. Rigorous studies carried out at large public teaching hospitals in Australia found that doctors were reluctant to increase safety in the wider health system, despite making every effort for their 'overworked' patients. Doctors' self-esteem was found to be delicate due to the uncertain nature of their work; colleagues provide support doctors need to deliver good care. However, these essential relationships and their cherished relationships with patients have disadvantages: reducing doctors' ability to admit to error. On top of this, senior doctors predict a future bereft of professional values - one where medicine is 'just a job'. While the loss of professional identity introduces new risks for patients and doctors, the repercussions of the more self-serving attitude of younger doctors are unknown. Reconstructing Medical Practice concludes that regulation, despite its proliferation, is a clumsy and limited approach to ensuring good care. It presents original and much-needed ideas for ways to rebuild the critical relationship between doctors and the system. By better valuing communication and workplace relationships, safe and satisfying medical practice can be reconstructed.

Psychiatric Dimensions of Medical Practice 2021 In this book, Johns Hopkins psychiatrist Phillip R. Slavney, M.D., offers a concise guide that will help primary-care physicians evaluate and treat patients who are delirious, demoralized, thinking of suicide, or refusing to follow medical advice. Although these patients may have emotional distress, cognitive disturbance, or maladaptive behavior, the cause of the problem is often the medical illness and treatment. For that reason, many such patients can receive excellent care from their primary care physicians—physicians who, given the resistance of managed care companies to specialist referrals, must bear that responsibility in any event. After an introductory chapter on clinical assessment, Slavney discusses each of these common problems as it occurs in the clinical setting, with illustrative cases and specific advice on evaluation and treatment. "Dr. Slavney has written lucidly and carefully about these very important issues, and he has clarified his exposition through a series of case examples. This book should be enormously useful not only to medical students and house staff but also to practicing physicians and faculty, especially those making the rounds in clinical services. One wishes, in fact, that it were possible to have Dr. Slavney along on rounds; this would be a very useful move in that direction."—Jeremiah A. Barondess, M.D., from the foreword

GP Wellbeing Jun 02 2022 This is the first book to explore the impact of 'burnout' on the current NHS workforce and how this can be addressed, from an insider GP perspective. Adam Staten, recently qualified GP and Euan Lawson, Fellow of the RCGP with over 20 years experience, discuss in engaging, accessible detail how burnout manifests psychologically, the complex reasons why GPs burn out and the individual and organizational impact this can have. Most importantly, the book offers practical advice on how to avoid burning out and how to manage the negative effects of an increasingly high-pressure role, exploring how GPs can develop resilience and how to create a way that builds a healthier work-life balance. A section is dedicated to the array of GP job options, with testimonials from practitioners working in diverse areas from education and academia to military and humanitarian settings. This book explores the challenges of working in general practice today, but it also demonstrates the potential for every GP to experience a personally and professionally satisfying career. Providing practical, workable advice and links to resources for help and support, the book enables readers to find opportunity within the perceived 'crisis'. By reading this book, you will find the means to improve not only your own working life but also to enhance the way you deliver care to your patients.
