Spectral Sensing Research For Surface And Air Monitoring In Chemical, Biological And Radiological

Defense And Security Applications Jan 15 2021 This book provides unique perspectives on the state of the art in multispectral/hyperspectral techniques for early-warning monitoring against chemical, biological and radiological (CB&R) contamination of both surface (e.g. land) and air (e.g. atmospheric) environments through the presentation of a comprehensive survey of the novel spectroscopic methodologies and technologies that are emerging to address the CB&R defense and security challenges of the future. The technical content in this book lends itself to the non-traditional requirements for point and stand-off detection that have evolved out of the US joint services programs over many years. In particular, the scientific and technological work presented seeks to enable hyperspectral-based sensing and monitoring that is in real time and in-line; low in cost and labor requirements; and easy to support, maintain and use in military and security-relevant scenarios.

Technology has further increased the possibilities of exploiting its potential for education. Is there an added value, though, in using technology to realize narrative learning experiences? And what are the advantages of embedding narrative in technology-based learning environments? Addressing such questions is the aim and focus of this volume. The book includes 12 chapters analysing different ways of building and using technology-mediated narrative learning environments or highlighting aspects that can help the reader gain a deeper understanding of their educational potential. The focus is not limited to cognition, but includes also motivation and emotion, which are important components of learning. Einführung ins Programmieren mit Processing Jul 29 2019 Processing ist eine relativ neue, universell einsetzbare Programmiersprache, die auf Java basiert und dadurch sehr große Ähnlichkeit damit aufweist, gleichzeitig aber viel von dessen Komplexität verbirgt und Funktionalität hinzufügt - insbesondere im graphischen Bereich. Dadurch ist sie nicht nur in hohem Maß für Programmieranfänger geeignet, um sich Konzepte und Denkmuster des Programmierens zu erschließen, sondern ermöglicht den späteren Umstieg, ohne dabei viel Erlerntes über Bord werfen zu müssen. Das bedeutet aber keineswegs, dass die Sprache nur für triviale Anfängeraufgaben geeignet oder eine reine Lernsprache wäre. Ganz speziell im Bereich der graphischen Datenverarbeitung und generativen Computergraphik spielt Processing Stärken aus, die ihresgleichen suchen. Dieses Buch richtet sich in erster Linie an den Programmieranfänger, führt diesen an die Bewältigung auch komplexerer Aufgaben mit Processing heran und stellt gleichzeitig grundlegende Konzepte der imperativen und der objektorientierten Programmierung vor. Auch die notwendigen theoretischen Hintergründe, die unabdingbar für das erfolgreiche Meistern einer jeden anderen Programmiersprache sind, kommen dabei nicht zu kurz. Ausführlich dokumentierter Beispielcode erschließt sowohl Konzepte als auch die Sprache. Eine Webseite zum Buch mit sämtlichen Codesnippets sowie Musterlösungen zu den Übungen (sowie den Errata) zum Download erweitert das Informationsangebot und rundet es ab.
