Fixed Revenue Accounting: A New Management Accounting Framework Jun 29 2022 This book is the first in the management accounting framework literature to provide readers with insights on how to manage revenue and profit models by developing relationships with customers. The Principal Editor, Professor Kenichi Suzuki, is the founding father of Fixed Revenue Accounting (FRA) and his inputs offer invaluable insights on how businesses can increase revenue and adopt preventative measures to deal with the fluctuations in the economy. FRA is a new management accounting tool that evaluates and manages the impacts of fixed customers on a company's financial health. 'Fixed customers' refer to frequent or regular customers who are expected to repeat their purchases. Their repeated purchases produce stability of revenue which in turn creates a stable profit environment and certainty. The profitability and stability generated by fixed customers can be utilized for strategic management, planning, and decision making to encourage investment for future growth. This book provides a deep understanding of the usefulness of the new management accounting tool, and covers both the introduction of the concept of FRA and accompanying case studies in the contexts of Japanese manufacturing and service companies adopting the FRA model by examining profitability, stability, and growth analysis.

Management and Cost Accounting Apr 27 2022 Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.

Managerial Accountant's Compass Mar 27 2022 This is the first detailed view of the managerial accountant's role and responsibilities in organization setting. Its aim is to foster role development: the opportunity to work at an advanced level of practice. Accounting studies develop technical skills associated with topics, and, responding to defined scenarios but provide very little guidance on what to recognizing and approaching the broad problems or challenges under conditions of uncertainty. It is a double first because it provides the managerial accountant's compass as a general purpose analytical framework for managerial accounting independent of any selected theory and method. The metaphor of a compass creates a mental schema for its four points named (1) goals and principles, (2) boundaries and constraints, (3) methods and models, and, (4) collegial relationships. Dynastic Chinese and some other Central Asian cultures, view the center as a fifth principal direction, giving a total of five points. The center represents a high standard ethical conduct and self-care, or moral compass. **Managerial Accountant's Compass** offers an integrated and systematic guide to approaching situations that are constantly changing. It gives a protective starting pattern which produces new meanings and awareness of the ambiguity and uncertainty for each situation. Ultimately the managerial accountant's compass can help you make more effective sense of yourself, your expertise and your practice in the organization where you work, which should open career opportunities.

Cost Accounting, a Managerial Emphasis, Third Canadian Edition. Student Solutions Manual Dec 12 2020 Mine and Mineral Economics Jun 17 2021 For any country's economy, mineral resources form an important part in generating revenue and increasing its GDP. This book investigates and promotes understanding of economic and policy issues, programmes and strategies for exploration, mining, beneficiation and marketing activities. Divided into ten chapters, the book puts emphasis on elaborating the principles of mine and mineral economics. Both quantitative and logical aspects of mine finance and accounting have been discussed. Nitty-gritties of mine taxation are further outlined and the reader is introduced to aspects relating to marketing and trading of minerals. Managing the global health response to epidemics Sep 08 2020 Recent epidemics have prompted large-scale international interventions, aimed at mitigating the spread of disease in a globalized world. During a crisis, however, global health actions – including planning and organizing, communicating about risk, and cost–benefit evaluations – aren't usually part of a single, integrated global response. Arguing that an uncoordinated approach can be challenged by local conditions and expectations, generating a wide range of resistance and difficulties, this volume provides important insights for future outbreak management and global health governance. Drawing on experiences with A(H1N1) and Ebola virus disease, the book is divided into three parts looking at how responses to global health crises have

developed, lessons learned from particular pandemics and the ethical implications of our management of them. Individual chapters focus on, among other issues, financing, cost–benefit analysis, matrix management, risk communication and organizational strategies. Taking a social science perspective, this valuable book outlines the current state of global health emergency responses and explores ways in which they can be improved. It is a useful read for academics and practitioners interested in global health, the sociology of health and illness, health economics and emergency management.

Reorganizing the Factory Jul 27 2019 Winner of the 2003 Shingo Prize! Reorganizing work processes into cells has helped many organizations streamline operations, shorten lead times, increase quality, and lower costs. Cellular manufacturing is a powerful concept that is simple to understand; however, its ultimate success depends on deciding where cells fit into your organization, and then applying the know-how to design, implement and operate them. *Reorganizing the Factory* presents a thoroughly researched and comprehensive "life cycle" approach to competing through cellular work organizations. It takes you from the basic cell concept and its benefits through the process of justifying, designing, implementing, operating, and improving this new type of work organization in offices and on the factory floor. The book discusses many important technical dimensions, such as factory analysis, cell design, planning and control systems, and principles for lead time and inventory reduction. However, unique to the literature, it also covers in depth the numerous managerial issues that accompany organizing work into cells. In most implementations, performance measurement, compensation, education and training, employee involvement, and change management are critically important. These issues are often overlooked in the planning process, yet they can occupy more of the implementation time than do the technical aspects of cells. Includes: Why do cells improve lead time, quality, and cost? Planning for cell implementation Justifying the move to cells, strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing, implementing, and operating cells Improving and adapting existing cells Structured frameworks and checklists to help analysis and decision-making Numerous examples of cells in various industries

Such a cost management system is only attainable if the importance of key business, operational and stakeholder requirements are recognised within the organisational context. In illustrating this importance, this book provides several case studies as examples thereof. The first two case studies focus on the engineering sector and illustrates the development of a cost management system in a water recycling context; and the design of a budgetary system in a mining engineering context. The remaining case studies focus on the services sector, including cost management systems for a digital technology services provider and a medical insurance services provider; an alternative activity-based costing approach for a public sector services provider; and finally a re-designed value stream for an automotive services provider. Academic researchers and industry managers in the fields of management accounting and financial management, as well as engineering and operations management, will find value in the experiences described herein.
