[A Biographical Dictionary of People in Engineering](#) May 21 2021 This book lists the work and contributions of thousands of people from many countries, representing numerous fields of endeavor, over many centuries. This work contains the necrologies (names, dates, and a brief biography) up to the year 2000 of people involved in engineering and invention literature. This book is a must for reference collections and those in the media who cover the field of engineering advancement.

[From NYC Lower East Side To NASA Satellite Operations Manager](#) May 09 2020 What was life like growing up on the Lower East Side of NYC during the Great Depression? Can you imagine it? For adults, of course, it was harsh; for a young boy like me, born in 1924, it was not as bad as you think. I actually had fun playing sports and games you probably never heard of. Learn about them. My vivid recollection paints a broad view of the Lower East Side for you to see what it was like: social activity, sports activity, bread lines, patriotism, politics, professional sports interest compare it to your experiences. I was fortunate not to be hungry for food but hungry to experience the wonders of our country. Learn how I broke out of the Lower East Side shell. A college education was hardly a goal among the youth in my community, but I made it at a young age, graduating from the City College of NY at twenty. I had five industrial engineering jobs, hardly the experience that would prepare me to manage NASA satellites operations. It did not, but by a quirk, I became operations manager of a series of NASA weather satellites called Nimbus, research satellites that provided many benefits to society you would be interested in learning about. So why not also learn how satellites operate? I describe that in simple terms. Of course this book is my life story my story of raising a family, having a productive career, paying back to society through volunteerism while keeping close to Judaism, and enjoying my senior years while still being productive at consulting work.

[Tesla](#) Jan 29 2022 Nikola Tesla was a major contributor to the electrical revolution that transformed daily life at the turn of the twentieth century. His inventions, patents, and theoretical work formed the basis of modern AC electricity, and contributed to the development of radio and television. Like his competitor Thomas Edison, Tesla was one of America's first celebrity scientists, enjoying the company of New York high society and dazzling the likes of Mark Twain with his electrical demonstrations. An astute self-promoter and gifted showman, he cultivated a public image of the eccentric genius. Even at the end of his life when he was living in poverty, Tesla still attracted reporters to his annual birthday interview, regaling them with claims that he had invented a particle-beam weapon capable of bringing down enemy aircraft. Plenty of biographies glamorize Tesla and his eccentricities, but until now none has carefully examined what, how, and why he invented. In this groundbreaking book, W. Bernard Carlson demystifies the legendary inventor, placing him within the cultural and technological context of his time, and focusing on his inventions themselves as well as the creation and maintenance of his celebrity. Drawing on original documents from Tesla's private and public life, Carlson shows how he was an "idealist" inventor who sought the perfect experimental realization of a great idea or principle, and who skillfully sold his inventions to the public through mythmaking and illusion. This major biography sheds new light on Tesla's visionary approach to invention and the business strategies behind his most important technological breakthroughs.

[Electric Locomotives](#) Sep 12 2020 The history of electric freight and inter-urban commuter locomotives in the U.S. begins with their development in East Coast urban centers and continues their service in the present day. Railways that used or continue to use electric motive power in cities, suburbs and even over mountain passes—including the B&O, Pennsylvania, New Haven, New York Central, Norfolk & Western, Illinois Central, Milwaukee Road, and Amtrak—are depicted in period and modern color photography. The book also covers legendary electricians like the S-motors that towed steam powered trains through tunnels and into busy urban stations and several more. The text includes discussion on the roles played by GE and Westinghouse, specialized equipment, and how technology laid the groundwork for the development of diesel-electric locomotives prior to WW II.
