Additive Fertigung von Bauteilen und Strukturen Mar 31 2022 Dieses Fachbuch vermittelt in insgesamt 13 Einzelbeiträgen die Möglichkeiten und Grenzen der Additiven Fertigung im Hinblick auf die Gestaltung von realen Bauteilen und Strukturen. Die Autoren sind Experten aus verschiedenen Fachgebieten von Hochschulen, Forschungseinrichtungen und Unternehmen.

Origin of Elements in the Solar System Oct 02 2019 Based on an American Chemical Society Symposium organized by Professors Glenn Seaborg and Oliver Manuel, this volume provides a comprehensive record of different views on this important subject at the end of the 20th century. They have assembled a blend of highly respected experimentalists and theorists from astronomy, geology, meteoritics, planetology and nuclear chemistry and physics to discuss the origin of elements in the solar system. The intent was to include all points of view and let history judge their validity.

Come on Down? Sep 12 2020 *Come on Down* represents an introduction to popular media culture in Britain since 1945. It discusses the ways in which popular culture can be studied, understood and appreciated, and covers its key analytical issues and some of its most important forms and processes. The contributors analyse some of popular culture's leading and most representative expressions such as TV soaps, quizzes and game shows, TV for children, media treatment of the monarchy, Pop Music, Comedy, Advertising, Consumerism and Americanization. The diversity of both subject matter and argument is the most distinctive feature of the collection, making it a much-needed and extremely accessible, interdisciplinary introduction to the study of popular media culture. The contributors, many of them leading figures in their respective areas of study, represent a number of different approaches which themselves reflect the diversity and promise of contemporary theoretical debates. Their studies encompass issues such as the economics of popular culture, its textual complexity and its interpretations by audiences, as well as

Cajun Literature and Cajun Collective Memory Dec 16 2020 How does Cajun literature, emerging in the 1980s, represent the dynamic processes of remembering in Cajun culture? Known for its hybrid constitution and deeply ingrained oral traditions, Cajun culture provides an ideal testing ground for investigating the collective memory of a group. In particular, francophone and anglophone Cajun texts by such writers as Jean Arceneaux, Tim Gautreaux, Jeanne Castille, Zachary Richard, Ron Thibodeaux, Darrell Bourque, and Kirby Jambon reveal not only a shift from an oral to a written tradition. They also show hybrid perspectives on the Cajun collective memory. Based on recurring references to place, the texts also reflect on the (Acadian) past and reveal the innate ability of the Cajuns to adapt through repeated intertextual references. The Cajun collective memory is thus defined by a transnational outlook, a transversality cutting across various ethnic heritages to establish and legitimize a collective identity both amid the linguistic and cultural diversity in Louisiana, and in the face of American mainstream culture. *Cajun Literature and Cajun Collective Memory* represents the first analysis of the mnemonic strategies Cajun writers use to explore and sustain the Cajun identity and collective memory.

Area-Wide Management of Fruit Fly Pests Mar 19 2021 Fruit fly (Diptera: Tephritidae) pests have a profound impact on horticultural production and economy of many countries. It is fundamental to understand their biology and evaluate methods for their suppression, containment, or eradication. *Area-Wide Management of Fruit Fly Pests* comprises contributions from scientists from around the world on several species of tephritids working on diverse subjects with a focus on area-wide management of these pests. The first three sections of the book explore aspects of the biology, ecology, physiology, behavior, taxonomy, and morphology of fruit flies. The next two sections provide evidence on the

efficacy of attractants, risk assessment, quarantine, and post-harvest control methods. The fifth and sixth sections examine biological control methods such as the Sterile Insect Technique and the use of natural enemies of fruit flies. The seventh section focuses on area-wide integrated pest management and action programs. Finally, the eighth section examines social, economic, and policy issues of action programs aimed at involving the wider community in the control of these pests and facilitate the development of control programs. Features: Presents information on the biology of tephritid flies. Provides knowledge on the use of natural enemies of fruit flies for their biological control. Includes research results on models and diets used for the Sterile Insect Technique. Reports developments on the chemical ecology of fruit flies that contribute to make control methods more specific and efficient. Reviews subjects such as Holistic Pest Management and Area-Wide Management Programs including social, economic, and policy issues in various countries. The Open Access version of this book, available at <https://www.taylorfrancis.com/books/9780429355738>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

The Oxford Handbook of Strategy Implementation Apr 07 2020 Many strategies fail not because they are improperly formulated but because they are poorly implemented. The *Oxford Handbook of Strategy Implementation* examines the crucial role of implementation in how business and managerial strategies produce returns. In this wide-ranging collection of essays, leading scholars address governance, resources, human capital, and accounting-based control systems, advancing our understanding of strategy implementation and identifying opportunities for future research on this important process.

Ethical and Legal Issues in Neurology Apr 19 2021 Advances in our understanding of the brain and rapid advances in the medical practice of neurology are creating questions and concerns from an ethical and legal perspective. *Ethical and Legal Issues in Neurology* provides a detailed review of various general aspects of neuroethics, and contains chapters dealing with a vast array of specific issues such as the role of religion, the ethics of invasive neuroscience research, and the impact of potential misconduct in neurologic practice.

The book focuses particular attention on problems related to palliative care, euthanasia, dementia, and neurogenetic disorders, and concludes with examinations of consciousness, personal identity, and the definition of death. This volume focuses on practices not only in North America but also in Europe and the developing world. It is a useful resource for all neuroscience and neurology professionals, researchers, students, scholars, practicing clinical neurologists, mental health professionals, and psychiatrists. A comprehensive introduction and reference on neuroethics Includes coverage of how best to understand the ethics and legal aspects of dementia, palliative care, euthanasia and neurogenetic disorders Brings clarity to issues regarding ethics and legal responsibilities in the age of rapidly evolving brain science and related clinical practice

The ability to measure and manipulate matter on the nanometer level is making possible a new generation of materials with enhanced mechanical, optical, transport and magnetic properties. This important book summarises key developments in nanotechnology and their impact on the processing of metals, polymers, composites and ceramics. After a brief introduction, a number of chapters discuss the practical issues involved in the commercial production and use of nanomaterials. Other chapters review ways of nanoengineering steel, aluminium and titanium alloys. Elsewhere the book discusses the use of nanoengineered metal hydrides to store hydrogen as an energy source, and the development of nanopolymers for batteries and other energy storage devices. Other chapters discuss the use of nanotechnology to enhance the toughness of ceramics, the production of synthetic versions of natural materials such as bone, and the development of nanocomposites. Nanostructure control of materials is an ideal introduction to the ways nanotechnology is being used to create new materials for industry. It will be welcomed by R&D managers in such sectors as automotive engineering as well as academics working in this exciting area. Reviews key developments in nanotechnology and their impact on various materials Edited by leading experts in the field

Handbook on Synchrotron Radiation Nov 02 2019

Volume 2 of this series concentrates on the use of synchrotron radiation which covers that region of the electromagnetic spectrum which extends from about 10eV to 3keV in photon energy and is essentially the region where the radiation is strongly absorbed by atmospheric gases. It therefore has to make extensive use of a high vacuum to transport the radiation to the workstation where the presence of hard X-rays can cause extensive damage to both the optics and the targets used in the experimental rigs. The topics chosen for this volume have been limited to the disciplines of physics and chemistry

RUNX Proteins in Development and Cancer Jun 29 2019 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes. As highlighted in the introduction and several of the 29 chapters, humans and other mammals have three RUNX genes that are known to play specific roles in blood, bone and neuronal development. However, their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well-known signaling pathways (Wnt, TGF β , Notch, Hippo) is indicative of a more general function in cell biology. Their documented roles in cell fate decisions include control of proliferation, differentiation, survival, senescence and autophagy. The pleiotropic effects of RUNX in development are mirrored in cancer, where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes. In the latter role, they display hallmarks of both 'gatekeepers' that modulate p53 responses and 'caretakers' that protect the genome from DNA damage. Several chapters focus on the importance of these genes in leukemia research, where RUNX1 and C/EBP β are frequently affected by chromosomal translocations that generate fusion oncoproteins, while recent studies suggest wider roles for RUNX modulation in solid cancers. Moreover, RUNX genes are intimately involved in the development and regulation of the immune system, while emerging evidence suggests a role in innate immunity to infectious agents, including HIV. At the biochemical level, the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis. Not surprisingly, RUNX activity is controlled at multiple levels, this includes miRNAs and a plethora of post-translational modifications. Several chapters highlight the interplay between the three mammalian RUNX genes, where cross-talk and partial functional redundancies are evident. Finally, structural analysis of the RUNX/C/EBP β interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy. This volume provides a compendium and reference source that will be of broad interest to cancer researchers, developmental biologists and immunologists.

Writing Lives Together Nov 14 2020 A diary entry, begun by a wife and finished by a husband; a map of London, its streets bearing the names of forgotten lives; biographies of siblings, and of spouses; a poem which gives life to long-dead voices from the archives. All these feature in this volume as examples of 'writing lives together': British life writing which has been collaboratively authored and/or joins together the lives of multiple subjects. The contributions to this book range over published and unpublished material from the late eighteenth to the late nineteenth centuries, including biography, auto/biographical memoirs, letters, diaries, sermons, maps and directories. The book closes with essays by contemporary, practising biographers, Daisy Hay and Laurel Brake, who explain their decisions to move away from the single subject in writing the lives of figures from the Romantic and Victorian periods. We conclude with the

reflections and work of a contemporary poet, Kathleen Bell, writing on James Watt (1736-1819) and his family, in a ghostly collaboration with the archives. Taken as a whole, the collection offers distinctive new readings of collaboration in theory and practice, reflecting on the many ways in which lives might be written together: across gender boundaries, across time, across genre. This book was originally published as a special issue of *Life Writing*.

Sleep Apnea and Snoring E-Book Dec 28 2021 Recent years have brought many significant changes to the field of sleep apnea and snoring, and this revised 2nd Edition keeps you up to date with every effective intervention. *Sleep Apnea and Snoring: Surgical and Non-Surgical Therapy*, 2nd Edition, takes a focused, multidisciplinary approach to all sleep apnea and snoring related illnesses, making it an outstanding reference for surgery in this key area within otolaryngology. New chapters, new techniques and procedures, and new contributing authors ensure that you're completely up to date. Covers recent topics such as transoral robotic assisted surgery, new techniques in nasal valve repair, and pediatric patients and sleep apnea. New chapters cover home sleep testing, lingual tonsil grading system, algorithms for surgery and for multi-level treatment, new techniques in nasal valve repair, and transoral robotic assisted surgery (TORS for OSA). New authors and associate editors provide a fresh perspective throughout the text. Includes contributions from leaders in neurology, pulmonology, psychiatry, otolaryngology, and oral and maxillofacial surgery to create a truly multi-disciplinary

Highly Mutable Animal RNA Viruses:

Adaptation and Evolution Aug 12 2020 Viruses are widely present in nature, and numerous viral species with a variety of unique characteristics have been identified so far. Even now, new emerging or re-emerging viruses are being found or re-found as novel viral classes or as quasi-species. Indeed, viruses are everywhere. Of note, viruses are pivotal as targets and tools of basic and applied sciences. On one hand, portions of the viruses are infectious for animals including humans, and cause various diseases in infected hosts by distinct mechanisms and at a different level of severity. While many of viruses are known to co-exist quietly with their hosts, pathogenic viruses certainly affect and threaten our society as well as individuals to provoke serious medical or economic attention. We should act against certain dreadful and highly infectious viruses as a global problem. Animal RNA viruses can readily mutate to adapt themselves in their hostile environments for their survival. Resultant viruses may sometimes show

essentially altered phenotypes from the original parental strains. This fundamental and general property of animal RNA viruses represents major extensive issues of scientific, medical, and/or economic importance. In this Research Topic, we have focused on the high mutability of animal RNA viruses, and selected relevant articles on animal viruses of broad-ranges such as primate lentiviruses, influenza viruses, paramyxoviruses, flaviviruses, rabies virus, norovirus, picornaviruses, and picobirnavirus. Each article has taken up intriguing aspects of the subject viruses. We are sure that readers acquire important information on virus mutation, adaptation, diversification, and evolution, and hope that researchers in the field related to virology gain some solid hints from the reported articles for further virological and/or medical studies. Finally, we thank all the contributing researchers in this Research Topic, entitled "Highly Mutable Animal RNA Viruses: Adaptation and Evolution", for their elegant and interesting works.

Climate Change: An Encyclopedia of Science, Society, and Solutions [3 volumes] Jul 11 2020

This three-volume set presents entries and primary sources that will impress on readers that what we do—or don't do—today regarding climate change will dramatically influence what life on this planet will be like for untold

numbers of generations. • Provides readers with a clearly written description of global-warming science and its role in shaping a body of knowledge regarding a worldwide issue that affects everyone • Suggests remedies for this serious problem, most notably a rapid rise in the implementation of wind power generation and a coming revolution in solar energy •

Impresses on readers that what Americans and the citizens and governments of other nations around the globe do over the next decades will determine the future of this planet for many tens of thousands of years to come • Includes primary documents sourced from major scientific journals and from the many reports on recent climate change from governmental organizations, including the Intergovernmental Panel on Climate Change (IPCC) and World Meteorological Organization (WMO), both part of the United Nations; and the U.S.
